|                                       | <p>territories through resource management planning and the development of sustainable agricultural activities.</p> <p>Community : The Project benefits community members in an area of high poverty. The Project fully integrates community consultation and participation in project activities aimed at improving their living conditions and well-being. Activities include capacity building, support for resource management planning, and the development of sustainable agricultural activities.</p> <p>Biodiversity : The project aims to promote habitat and biodiversity protection. Forest conservation and the reduction of pressure on forest resources through community activities will help preserve the remarkable biodiversity of these ecosystems.</p> |

# 1 SUMMARY OF PROJECT BENEFITS

## 1.1 Unique Project Benefits

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

| Outcome or impact estimated by the end of project lifetime | Section reference |
|------------------------------------------------------------|-------------------|
| 1)                                                         |                   |
| 2)                                                         |                   |
| 3)                                                         |                   |
| 4)                                                         |                   |
| 5)                                                         |                   |

## 1.2 Standardized Benefit Metrics

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 2 PROJECT DETAILS

### 2.1 Project Goals, Design and Long-Term Viability

#### 2.1.1 Summary Description of the Project (VCS, 3.2, 3.6, 3.10, 3.11, 3.13, 3.14; CCB, G1.2)

The Lisala REDD+ Project (hereinafter “the Project”) is a REDD+ initiative that aims to implement an integrated and comprehensive approach designed to reduce carbon emissions by addressing the drivers of deforestation and forest degradation in the DRC, namely slash-and-burn agriculture and charcoal production. The overall objective of the Lisala REDD+ Project is to draw inspiration from the approaches of the PIREDD Mai-Ndombe (supported by the Forest Investment Program (FIP) and the Central African Forest Initiative (CAFI) with the World Bank as the executing agency), to improve community livelihoods and forest landscape management, thereby reducing greenhouse gas emissions from deforestation and forest degradation in the concession.

The activities of the Lisala REDD+ Project will be implemented within the conservation concession No. 04/24 (hereinafter “the concession”), located in the Lisala territory of the province of Mongala, in the Democratic Republic of Congo (DRC). The Project zone encompasses the entire surface of the concession, covering an area of 182'751 hectares, primarily covered by forests (148'642 hectares) and rural development areas (34'109 hectares). The forests in the concession that were previously intended for logging have been converted to conservation areas.

Situated in the heart of the Congo Basin forests, the concession comprises approximately 63 villages with a growing population of around 72k people, mainly located along its outer boundaries. Human activities in the region, particularly agriculture, are causing deforestation that is progressing towards the heart of the concession.

- The Lisala REDD+ project aims to combat deforestation by identifying its various drivers and working closely with local authorities as well as all relevant stakeholders. To this end, it will implement a coherent and coordinated territorial approach, drawing on the different pillars of the Democratic Republic of Congo's National REDD+ Strategy. The project's operational framework includes the following strategic action areas:
- Local authorities with enhanced powers will organize land use planning exercises within village communities;
- Trained and motivated technical extension services will monitor and support community forest management;
- Support will be provided for the development of management plans that are adapted to the region's agricultural environment;
- Training and supervision of small-scale foresters will be provided, alongside the dissemination of agricultural techniques to increase yields and incomes for the rural population;
- Family planning initiatives will be considered to manage population growth over the medium term;
- Rehabilitation of public infrastructure (school and health center) will be supported through Local Development Funds.

As described above, the project's activities aim to achieve ambitious goals in restoring and preserving biodiversity, strengthening communities' capacity for action and supporting their economic development, as well as promoting climate change mitigation. This will result in reduced pressure on forests, which will lead to a reduction in unplanned deforestation and the restoration of forest ecosystems, the development

of sustainable and profitable agricultural activities for communities, the establishment of a system that integrates the various communities in an inclusive and participatory manner in the management of concession resources, and the rehabilitation of public infrastructure (schools, health centers, roads, and water sources) that will reduce poverty and the isolation of villages.

The project is aligned with the national REDD+ strategy, established in 2012, which aims to stabilize forest cover at 63.5% by 2030. It fully complies with all applicable DRC legislation for REDD+ project development, including submission to the national REDD+ approval process, the securing of Free, Prior and Informed Consent (FPIC) from local communities, and the completion of a social and environmental impact assessment.

The Project applies the VCS approved VM0007 (v.1.8) Methodology Framework and is expected to reduce emissions by an average of 719 149 tCO<sub>2</sub>/year, and a total of 21'5 million tCO<sub>2</sub> during the first crediting period of 30 years.

The Project is not located within a jurisdiction covered by a jurisdictional REDD+ program.

### 2.1.2 Audit History (VCS, 4.1)

| Audit type | Period                                                                                                                                                 | Program | Validation/verification body name | Number of years |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-----------------------------------|-----------------|
| Validation | This project is under development and has not yet undergone validation or verification. The audit history table will be completed prior to validation. | VCS     | To be determined                  | N/A             |
|            | ....                                                                                                                                                   |         |                                   |                 |

### 2.1.3 Sectoral Scope and Project Type (VCS, 3.2)

*Using the table below, state the Agriculture, forestry, and other land use (AFOLU) project category, and the project activity type applicable to the project.*

|                                            |                                                                      |
|--------------------------------------------|----------------------------------------------------------------------|
| <b>Sectoral scope</b>                      | 14: Agriculture, forestry, and other land use (AFOLU)                |
| <b>AFOLU project category <sup>1</sup></b> | REDD+ (Reducing Emissions from Deforestation and forest Degradation) |

**Project activity type**

Avoiding Unplanned Deforestation (AUD)

### 2.1.4 Project Eligibility (VCS, 3.1, 3.6, 3.8, 3.18, 4.1; CCB Program Rules, 4.2.4, 4.6.4)

The Lisala REDD+ Project is eligible to participate under both the Verified Carbon Standard (VCS) Program and the Climate, Community & Biodiversity (CCB) Standards, as demonstrated below.

Under the VCS Program, the project complies with all applicable program rules, including legal compliance, use of eligible and approved methodologies, and adherence to the latest version of the standard (currently v4.7). The project respects national laws, regulations, and customary rights in accordance with Congolese legislation, as further detailed in Section 2.5.1.

The project applies the VCS-approved VM0007 REDD+ Methodology Framework (REDD-MF), version 1.8, which is currently eligible and active under the VCS Program. All relevant modules and tools required by this methodology, including the AFOLU Non-Permanence Risk Tool and modules for baseline determination and leakage accounting, will be implemented. The project uses standardized approaches for demonstrating additionality and establishing baselines, and applies all default parameters and factors in full compliance with the VCS Methodology Requirements.

The Lisala REDD+ Project falls under VCS Scope 14 (Agriculture, Forestry and Other Land Use) and is classified as an Avoided Unplanned Deforestation (AUD) activity. It aims to reduce GHG emissions primarily associated with slash-and-burn agriculture and unsustainable wood extraction within the Lisala conservation concession in Mongala Province. The project area encompasses approximately 148 642 hectares of natural forests. It is designed as a single-location project and does not incorporate grouped that would involve adding new activity instances after validation.

The project start date is 1 March 2025. It will be listed on the Verra Registry within the same year, and validation will occur within the five-year timeframe required for large-scale AFOLU projects under the VCS Program. Prior to validation, the project will complete the required 30-day public comment period, and the validation report and statement will be submitted within one year following the close of this period, in compliance with VCS requirements.

The Lisala REDD+ Project is also eligible under the CCB Standards. It delivers significant benefits for climate, communities, and biodiversity. Beyond reduce emissions by avoiding deforestation, the project also supports sustainable development through participatory land-use planning, sustainable agricultural practices, and investments in infrastructure such as schools and health centers, contributing to improved livelihoods and social welfare for local communities. In terms of biodiversity, the project intend to preserves 148 642 hectares of tropical forest within the Congo Basin, recognized as one of the world's most critical biodiversity hotspots.

Stakeholder engagement was conducted through inclusive, culturally appropriate consultations led by the Congolese NGO AMAR, ensuring that Free, Prior, and Informed Consent (FPIC) was obtained from all relevant communities. A grievance redress mechanism is in place to manage potential conflicts and ensure ongoing dialogue with stakeholders.

Legal rights over the concession are secured through a formal contract between Equaforest SARLU (now Taranis Congo) and the Government of the Democratic Republic of Congo. Taranis Operations Limited, as the project proponent, is undergoing the REDD+ investment homologation process required under Ministerial Order No. 047/CAB/MIN/EDD/AAN/MMUOS/2018, which, once completed, will secure exclusive rights over the Emission Reductions generated by the project.

The project does not conflict with any existing VCS or other GHG program rules and all validation and verification activities will be conducted in accordance with ISO 14064-3 and ISO 17029, ensuring compliance with the VCS Program requirements for third-party validation and verification.

### 2.1.5 Transfer Project Eligibility (VCS, 3.23, Appendix 2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.1.6 Project Design (VCS, 3.6)

Indicate if the project has been designed as:

- ☒ Single location or installation
- ☐ Multiple locations or project activity instances (but not a grouped project)
- ☐ Grouped project

*The following sub-section is only required for grouped projects. If not applicable, indicate so and delete instruction and headings for sub-section 2.1.6.1 below.*

#### 2.1.6.1 Eligibility Criteria for Grouped Projects (VCS, 3.6; CCB, G1.14)

### 2.1.7 Project Proponent (VCS, 3.7; CCB, G1.1)

|                   |                                                    |
|-------------------|----------------------------------------------------|
| Organization name | Taranis Operations Limited                         |
| Contact person    | Bruno Visconti                                     |
| Title             | Corporate investment manager                       |
| Address           | 8 Hanover Square, London, United Kingdom, W1S 1HQ. |

## 2.1.9 Project Ownership (VCS, 3.2, 3.7, 3.10; CCB, G5.8)

### Land Ownership

The concession rights to the conservation concession No. 04/24 have been granted to Equaforest, later renamed Taranis Congo, subsidiary of Taranis Operations Limited (Project Proponent), pursuant to the signing of a conservation concession agreement on December 5, 2024, between the Democratic Republic of Congo, represented by the Ministry of Environment and Sustainable Development and Equaforest (now Taranis Congo), for a duration of 25 years.

### Project Ownership

The Lisala REDD+ Project is led by Taranis Operations Limited, acting as the Project Proponent. In accordance with Article 3 of Ministerial Decree No. 047/CAB/MIN/EDD/AAN/MMUOS/2018 of May 9, 2018 <sup>2</sup>, which defines the procedure for approving REDD+ investments in the Democratic Republic of Congo, the State has exclusive ownership rights over Congolese Emission Reductions Units (ERUs) and may transfer them to the REDD+ investment holder, if and only if the latter validates the legal homologation procedure imposed by Article 3 of Ministerial Decree No. 047/CAB/MIN/EDD/AAN/MMUOS/2018 of May 9, 2018.

An irrevocable and enforceable collaboration agreement between Taranis Congo, acting on behalf of Taranis Operations Limited, and the Democratic Republic of Congo represented by the Ministry of Environment and Sustainable Development has been signed. This agreement sets out the terms and conditions of cooperation between the Parties and their respective rights and obligations in connection with the implementation of the Project. This agreement confirms the government's approval of the Project and acknowledges Taranis Operations Limited's exclusive ownership rights over the carbon credits generated by the Project, subject to the legal homologation process stipulated in Article 3 of Ministerial Decree No. 047/CAB/MIN/EDD/AAN/MMUOS/2018 dated May 9, 2018.

## 2.1.10 Project Start Date (VCS, 3.8)

|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Justification | <p>Date of signature of the contract between the project proponent, Taranis Operations Limited, and the project operator The Shared Wood Company SAS (sWc).</p> <p>Launch of public consultation activities (awareness and FPIC) and recruitment of project teams.</p> <p>The project will be listed during the three-year period following the start of the project for validation within five years.</p> |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### 2.1.11 Benefits Assessment and Project Crediting Period (VCS, 3.9; CCB, G1.9)

|                                               |                                                                                                                                                                                                  |
|-----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Crediting period                              | The project crediting period is 90 years, in line with VCS Standard v4.7 requirements for AFOLU projects, consisting of an initial 30-year period renewable up to three times to reach 90 years. |
| Start date of first or fixed crediting period | The project has a first crediting period of 30 years from March 3, 2025, to February 28, 2055.                                                                                                   |
| CCB benefits assessment period                | The CCB benefits assessment period is 90 years, matching the project crediting period, during which climate, biodiversity, and community well-being outcomes will be monitored.                  |

### 2.1.12 Differences in Assessment/Project Crediting Periods (CCB, G1.9)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.1.13 Project Scale and Estimated Reductions or Removals (VCS, 3.10)

Indicate the estimated annual GHG emission reductions/carbon dioxide removals (ERRs) of the project:

☐ < 300,000 tCO<sub>2</sub>e/year (project)

☒ ≥ 300,000 tCO<sub>2</sub>e/year (large project)

Complete the table below for the first (if renewable) or fixed crediting period:

| Calendar year of crediting period | Estimated reductions or removals (tCO <sub>2</sub> e) |
|-----------------------------------|-------------------------------------------------------|
|-----------------------------------|-------------------------------------------------------|

|                                     |         |
|-------------------------------------|---------|
| 01-March-2025 to 31-December-2025   | 650 156 |
| 01-january-2026 to 31-December-2026 | 805 170 |
| 01-january-2027 to 31-December-2027 | 662 367 |
| 01-january-2028 to 31-December-2028 | 747 460 |
| 01-january-2029 to 31-December-2029 | 670 071 |
| 01-january-2030 to 31-December-2030 | 683 565 |
| 01-january-2031 to 31-December-2031 | 696 077 |
| 01-january-2032 to 31-December-2032 | 708 589 |
| 01-january-2033 to 31-December-2033 | 721 101 |
| 01-january-2034 to 31-December-2034 | 733 612 |
| 01-january-2035 to 31-December-2035 | 730 166 |
| 01-january-2036 to 31-December-2036 | 726 536 |
| 01-january-2037 to 31-December-2037 | 726 157 |
| 01-january-2038 to 31-December-2038 | 724 300 |
| 01-january-2039 to 31-December-2039 | 724 321 |
| 01-january-2040 to 31-December-2040 | 724 321 |
| 01-january-2041 to 31-December-2041 | 724 321 |
| 01-january-2042 to 31-December-2042 | 724 321 |
| 01-january-2043 to 31-December-2043 | 724 321 |
| 01-january-2044 to 31-December-2044 | 724 321 |
| 01-january-2045 to 31-December-2045 | 724 321 |
| 01-january-2046 to 31-December-2046 | 724 321 |
| 01-january-2047 to 31-December-2047 | 724 321 |
| 01-january-2048 to 31-December-2048 | 724 321 |

|                                                                 |            |
|-----------------------------------------------------------------|------------|
| 01-january-2049 to 31-December-2049                             | 724 321    |
| 01-january-2050 to 31-December-2050                             | 724 321    |
| 01-january-2051 to 31-December-2051                             | 724 321    |
| 01-january-2052 to 31-December-2052                             | 724 321    |
| 01-january-2053 to 31-December-2053                             | 724 321    |
| 01-january-2054 to 31-December-2054                             | 724 321    |
| Total estimated ERRs during the first or fixed crediting period | 21 574 463 |
| Total number of years                                           | 30         |
| Average annual ERRs                                             | 719 149    |

#### 2.1.14 Physical Parameters (CCB, G1.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 2.1.15 Social Parameters (VCS, 3.18; CCB, G1.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 2.1.16 Project Zone Map and Project Location (VCS, 3.11, 3.18; CCB, G1.4-7, G1.13, CM1.2, B1.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 2.1.17 Project Activities and Theory of Change (VCS, 3.6; CCB, G1.8)

The Project aims to implement various activities within the concession by helping communities shift towards activities that reconcile natural resource and forest protection with economic viability, thereby promoting a win-win system. At the same time, previously exploited areas of the concession will be set aside for conservation purposes to ensure their preservation.

The Project will target all populations living within the concession. The project therefore plans to support community activities in the 63 villages identified in the concession, ensuring that inclusive and representative actions are promoted, with a particular focus on women and vulnerable peoples.

The project is based on eight main areas of action:

- Component A: Establishment of a governance framework ;
- Component B: Institutional support ;
- Component C: Implementation of planned investments, as identified in the strategic management plans ;
- Component D: Other investments in LDCs (Local Development Committees) ;
- Component E: Development of value chains based on perennial crops ;
- Component F: Investments in infrastructure (roads, bridges) of common interest to restore connectivity between territories ;
- Component G: Support for the most vulnerable communities ;
- Component H: Support for family planning.

#### **Component A: Establishment of a governance framework.**

The formation of Local Development Committees (LDCs) at the village level is essential to the success of the Lisala REDD+ Project. The Agriculture Act (December 2011), supplemented by an enabling act published in December 2013, describes how all villages located within concessions can be organized into LDCs. Each LDC can represent groups of two to four villages whose territory is under the authority of the same traditional leader (land chief). These LDCs will form councils for agriculture and rural management (CARGs) for each sector and zone (sectoral and zonal CARGs), and it is planned that they will use mapping tools for natural resource and land management.

The basic methodology of the Lisala REDD+ Project is to strengthen the organizational structure of territorial areas and Decentralized Territorial Entities (DTEs) based on the model of local development committees (LDCs) and agriculture and rural management councils (CARGs) recommended by the Ministry of Rural Development. This strengthening will be achieved through the creation or regeneration of these institutions and their eventual official legal recognition. Traditional political structures, such as the elected members of future DTEs, will work closely with these institutions. The training of the CLDs will be organized and delivered by the Congolese NGO AMAR, which will be responsible for informing and encouraging communities to join the LDCs and then supporting the creation of these LDCs in each territory.

These institutions will be responsible for formulating Natural Resource Management Plans (NRMPs) for village territories. These plans, which will be launched at the level of cultivated village territories up to sectors (DTEs), groupings (based on customary organization) and LDCs, will lead to a collective analysis of the evolution of natural resources and the factors of deforestation and forest degradation. They will

result in the planning of appropriate measures to ensure that this evolution is sustainable over time while improving the living conditions of the populations.

The methodology for implementing the Natural Resource Management Plans (NRMPs) includes:

- (i) The delimitation of the main types of vegetation cover using satellite images, validated in a participatory manner;
- (ii) Inventory of land use and tenure patterns;
- (iii) Creation of a mapped inventory of biodiversity and associated threats;
- (iv) Estimation of local communities' agricultural land needs and identification of expansion areas;
- (v) Participatory definition of actions to be taken in the areas concerned (savannah, forests, non-timber forest products, fisheries, flooded forests, infrastructure).

These elements will be developed in a participatory manner to ensure that qualified representatives of all relevant groups participate in program meetings and that their specific interests are understood and addressed separately and specifically in the program. This includes women, youth and vulnerable groups.

The program will take into account ongoing initiatives on georeferenced village lands, including the Rainforest Foundation UK's "Mapping for Rights" project.

To achieve these results, it will be necessary to:

- a. Establish Councils for Agriculture and Rural Management (CARGs);
- b. Engage Local Implementing Agencies (LIAs), which will be local NGOs, to establish (or re-establish) and georeference the boundaries of village cultivated plots;
- c. Train and equip these LMAs;
- d. Create Local Development Committees (LDCs), demarcate their plots and register them;
- e. Verify the socio-environmental compliance of these plans and conduct the necessary socio-environmental studies;
- f. Monitor and evaluate implementation.

#### Benefits for the community:

Strengthening community structures will reinforce community organization and promote inclusive representation in institutions and the project. These LDCs will also enable communities to create a forum for discussion on the development of their land. This will strengthen the representation of vulnerable groups and reduce discrimination and inequality.

#### Climate and biodiversity:

The development of NRMPs will ensure the sustainable and efficient use of resources, enabling the protection and restoration of forest ecosystems and biodiversity by reducing pressure on their resources.

In the long term, these measures will promote carbon storage and climate change mitigation.

### **Component B: Institutional support.**

Decentralized government services need effective organization and adequate resources to fulfill their mission. The validation of management plans and, above all, the smooth implementation of agreements between LDCs are essential to improve the coordination and effectiveness of the teams from the three ministries responsible for village territories (agriculture, environment/forests, rural development).

To implement this component, the Project plans to:

- a. Support the drafting and promulgation of regulations relating to the Agricultural Law of December 24, 2011, which provides for the creation of land advisory councils and their territorial entities at the primary level, implement the draft law recognizing CARG areas, support local development committees (LDCs), organize their functioning and provide support for the implementation of legal provisions relating to the creation and implementation (by the Ministry of Rural Development) of CARGs and LDCs ;
- b. Align existing structures with the new regulations, for example by adopting recommendations based on the new law and providing training on the new responsibilities and functions arising from the law, particularly in the land sector ;
- c. The Ministry of Environment needs assistance to improve its capacity to supervise forest management activities. Units within the Ministry of Rural Development and the provincial Ministry of Agriculture need to be able to register the status of relevant organizations (i.e., LDCs) and provide relevant registration documents to interested parties ;
- d. Establish a complaint and appeal mechanism, either by facilitating access to the courts or by improving the supervision of employees by their superiors ;
- e. Strengthen decentralized services through training and the provision of equipment ;
- f. Facilitate field missions in villages.

### **Benefits for the community:**

Component B will strengthen public institutions, particularly in the agricultural sector. This strengthening will help preserve the long-term benefits of the project.

### **Climate and biodiversity:**

The creation of LDCs promotes a local and sustainable governance framework for resource management.

### **Component C: Implementation of planned investments, as identified in the strategic management plans.**

This component will be implemented through various means, including:

- (i) various forms of training (initial training, field schools, etc.);
- (ii) initial investment and provision of inputs;
- (iii) payment for results or Payment for Environmental Services (PES).

Investments will target traditional smallholders who can benefit from the project on areas ranging from 5 to 20 hectares for plantations and 50 to 100 hectares for protected areas. These farmers must have secured land rights and their land must be located in areas approved by the LDCs.

Various investments will be possible, including the development of agriculture in savannah areas (plantations, agroforestry, firebreaks), improving the sustainability of agroforestry, and protecting biodiversity-rich forests.

#### Benefits for communities:

Component C will promote community economic development by strengthening agricultural activities and infrastructure. These investments aim to improve the quality of life in villages and reduce poverty.

#### Climate and biodiversity:

Some of the planned activities have significant environmental benefits, including the development of agroforestry and the protection of savannahs against fires. These actions will promote the return of biodiversity to areas severely degraded by fire. They will also reduce pressure on forests by developing agricultural activities in the savannah.

### **Component D: Other investments in LDCs**

LDCs can receive support in various areas such as co-management of fisheries, creation of fish ponds, and small-scale processing equipment.

#### Climate and biodiversity:

Component D supports sustainable fishing practices and rational management of fish stocks. Fish stocks are now seriously threatened by population growth, which is putting severe pressure on stock renewal.

#### Benefits for communities:

NGOs will provide support for the development of sustainable fishing activities.

### **Component E: Development of value chains from perennial crops.**

The objective of this component is to strengthen or revitalize value chains for local products, particularly rubber, palm oil, coffee, and cocoa. This includes support and assistance to producers to improve the value of their products, to facilitate the purchase of equipment, to support local processing centers, to promote trade routes, to develop fair trade certification. To achieve these objectives, the project will sign agreements with downstream operators in the sector. These agreements will aim at identifying professional operators working at fair prices. These operators are: (i) cooperatives or producer

associations, such as the one operating in the cocoa sector (see below); (ii) large private operators already present in the region (forest concessionaires or livestock farmers) who wish to diversify their activities ; or (iii) private companies already established in the DRC and wishing to invest in the provinces of Mongala. The Project provides the necessary resources to identify these operators and co-finance their establishment in the region.

#### Benefits for the community:

The revitalization of the agricultural sectors and value chains will enable sustainable agricultural economic development for the populations.

#### Climate and biodiversity:

The development of more sustainable agricultural chains reduces pressure on resources and forests.

### **Component F: Investments in infrastructure of common interest to restore connectivity between territories.**

Despite its extensive river network and the significant progress made since 2010 in terms of commercial vessel profitability and substantial investment in this area, entire provinces remain isolated because river boats remain a dangerous and slow means of transport, and trucks have difficulty accessing the province of Mongala. The following priorities have been identified in the area of transport:

- Stricter regulation of river passenger transport and the equipment of these boats (spare engines, night lighting), as well as load control;
- Completion and maintenance of commercial roads within concessions, including the reconstruction of wooden bridges where necessary;
- Maintenance of the most important rural tracks leading to waterways and connecting the main towns in the Lisala territory.

#### Benefits for communities:

The economic development of villages is severely hampered by their isolation. Restoring communication links would promote strong economic development and improve access to healthcare and education.

### **Component G: Support for the most vulnerable communities.**

The Project fully integrates vulnerable groups into local project governance to avoid discrimination and encourages their participation in activities.

#### Benefits for the communities:

This component aims to support the most vulnerable communities while avoiding any negative impact on their way of life and traditions.

### **Component H: Support for family planning**

The Project supports the permanent recruitment of local NGOs (one per territory) to promote, in close collaboration with the Ministry of Health, the following activities among the 12,000 farming households in the concession:

- Information/awareness-raising on family planning methods with the support of opinion leaders (political, traditional and religious), combined with access to contraceptive methods. These family planning methods will also be extended to the prevention of Ebola and HIV/AIDS;
- Education for young people, particularly girls, to promote access to employment and the setting of reasonable targets for the number of children per family.

### Benefits for the community:

This aspect aims to reduce poverty and improve the health of populations through awareness and prevention.

### Climate and biodiversity:

Awareness of family planning aims to prevent excessive population growth, which would increase pressure on forests.

Based on Social and Biodiversity Impact Assessment Manual recommendations, the following change theories were developed :

#### BIODIVERSITY - General objective: Preservation of biodiversity

COMMUNITIES - General objective: contribution to rural poverty reduction

Figure 2: Theory of change for communities Lisala REDD+ Project

### 2.1.18 Sustainable Development Contributions (VCS, 3.17)

The DRC is committed to sustainable development within the framework of the 2030 Agenda for Sustainable Development and has adapted the Sustainable Development Goals (SDGs) established at the United Nations Conference on Sustainable Development (Rio+20 Conference). This 2030 Agenda comprises 17 global goals with 169 targets, measured using 232 specific indicators, which address the social, economic and environmental dimensions of sustainable development. In 2016, the DRC established the Congolese Observatory for Sustainable Development, a framework that monitors, evaluates and reports on the implementation of the SDGs. The DRC's strategy is based on an approach that integrates stakeholder awareness and the implementation of public policies with a strong focus on SDGs that incorporate the social dimension. The country also prioritizes the environmental dimension with a commitment to preserving its natural resources. The Lisala REDD+ Project aims to contribute to these national priorities by promoting the achievement of SDGs that incorporate social and environmental dimensions.

All SDGs integrated into the project are listed in the table below.

Table 1: Sustainable Development Contributions

| Row number            | SDG target        | Net impact on SDG indicator                                                                               | Project's indicators                                                                                                                 |
|-----------------------|-------------------|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Sequential row number | SDG Target number | Indicate the project's contribution to the SDG Indicator (implemented activities to increase or decrease) | Brief description of the quantifiable impact of the project's activities related to the SDG indicator, during the monitoring period. |

|                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|  | <p><b>1.1.</b> By 2030, eradicate extreme poverty for all people everywhere, currently measured as people living on less than \$1.25 per day</p> <p><b>1.2.1.2</b> By 2030, reduce at least by half the proportion of men, women and children of all ages living in poverty in all its dimensions as defined by each country</p> <p><b>1.3.1.5</b> By 2030, enhance the resilience of the poor and other people in vulnerable situations to, and reduce their exposure to, extreme weather events and other economic, social and environmental shocks and disasters</p> | <p>Reducing poverty is one of the DRC's key national priorities. The project contributes to this objective by promoting the development and diversification of economic activities, particularly in the agricultural sector. The development of these sustainable activities will strengthen community resilience to climate change through (i) the adoption of improved practices to increase food production and (ii) capacity building via trainings.</p> <p>By fostering income-generating opportunities, improving territorial connectivity, and supporting local governance through the creation of LDCs, the project enhances both the economic empowerment and social inclusion of isolated communities.</p> | <ul style="list-style-type: none"> <li>- Number of ha of agroforest plantations (acacia-manioc)</li> <li>- Number of ha of perennial crops (coffee, cacao, rubber trees, palm oil) in forest areas</li> <li>- Number of woodland parcels developed</li> <li>- Number of trainings and technical support for the development of agricultural activities</li> <li>- Number of LDCs created/rehabilitated in the villages of the concession</li> </ul> |

| <p>2 ZERO HUNGER</p>  | <p>2.1 By 2030, end hunger and ensure that everyone, especially the poor and vulnerable, including infants, has access to safe, nutritious, and sufficient food all year round.</p> <p>2.3 By 2030, double the agricultural productivity and incomes of smallholder producers, in particular women, indigenous peoples, family farmers, pastoralists and fishers, including through ensuring equal access to land, other productive resources and inputs, knowledge, financial services, markets and opportunities for value addition and non-farm employment.</p> <p>2.4 By 2030, ensure sustainable food production systems and implement resilient agricultural practices that increase productivity and production, contribute to the preservation of ecosystems, strengthen resilience to climate change, extreme weather, drought, flooding and other disasters, and progressively improve land and soil quality.</p> | <p>Reducing malnutrition is one of the DRC's priorities. Cases of malnutrition are particularly prevalent in isolated areas of the DRC where food supplies are unstable.</p> <p>The project aims to develop a sustainable food system for communities in the Lisala concession. To achieve this, the project will work to support communities in developing sustainable and resilient agricultural systems. The project will target small-scale producers and provide them with access to training, technical support (provision of resistant varieties, development of nurseries) and PESs that will increase yields and income while promoting forest conservation.</p> <p>The project will support the development of agricultural value chains (training, provision of processing units, etc.) and thus enable the development of agricultural sectors and reduce hunger.</p> <p>The development of NRMPs will encourage reflection on land and resource use and the introduction of measures to make these actions more sustainable, such as the implementation of hunting management plans.</p> <p>Finally, the project also aims to promote sustainable fishing by supporting NGOs. This will make fishing activities more sustainable and allow fish stocks to regenerate while meeting food needs.</p> | <ul style="list-style-type: none"> <li>- Number of ha of agroforest plantations (acacias-manioc);</li> <li>- Number of ha of perennial culture (coffee, cacao, rubber trees, palm oil) in forest area ;</li> <li>- Number of processing units installed and trainings organized ;</li> <li>- Number of NRMPs developed;</li> <li>- Number of km of roads rehabilitated and bridges built to enhance connectivity.</li> </ul> |

### 2.1.20 Risks to the Project (CCB, G1.10)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.1.21 Benefit Permanence (CCB, G1.11)\*

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.1.22 Financial Sustainability (CCB, G1.12)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 2.2 Without-project Land Use Scenario and Additionality

### 2.2.1 Conditions Prior to Project Initiation and Land Use Scenarios without the Project (VCS, 3.13; CCB, G2.1)

The Lisala REDD+ Project was not implemented with the intent of artificially generating greenhouse gas (GHG) emissions for the purpose of their subsequent reduction, removal, or destruction. All historical and ongoing deforestation observed within the project area results from prevailing socio-economic drivers, demographic pressures, and governance challenges, entirely independent of any project planning activities.

The project area is located within the Congo Basin rainforest ecosystem, characterized by dense tropical moist broadleaf forests with high levels of biodiversity and significant carbon storage capacity. This ecosystem is globally recognized as a critical biodiversity hotspot and plays a vital role in both regional and global climate regulation.

Historically, the Lisala concession was predominantly covered by intact and semi-intact tropical forests, utilized intermittently by local communities for subsistence activities such as hunting, gathering, and small-scale shifting agriculture. In past decades, the area was formally allocated as a commercial logging concession and underwent industrial-scale timber harvesting under regulated forestry operations. However, even during its tenure as a logging concession, the area faced increasing pressure from unplanned deforestation and forest degradation driven by local community activities. These pressures — notably slash-and-burn agriculture, charcoal production, and informal fuelwood extraction — have intensified in recent years, fueled by population growth and limited alternative livelihoods. Recognizing

these growing threats, the concession was acquired and converted into a conservation concession to focus on reducing deforestation dynamics through collaborative efforts with local communities.

Environmental conditions prior to project initiation reflect both the ecological richness of the region and the cumulative impacts of human activities. The area experiences a tropical humid climate with bimodal rainfall patterns, receiving an average of approximately 1,800 mm of rainfall annually, and mean annual temperatures ranging between 23.9 °C and 25.4 °C (Fick, S.E. and Hijmans, R.J., 2017. WorldClim 2: new 1 km spatial resolution climate surfaces for global land areas. *International Journal of Climatology*, 37(12): 4302-4315). Hydrologically, the landscape is interlaced with numerous small rivers and tributaries of the Congo River, resulting in seasonal flooding across some lowland zones. The terrain is moderately undulating, with elevations ranging from 300 to 500 meters above sea level, and an average elevation of approximately 400 meters (Copernicus DEM, ESA/European Commission, 2020). Soils are predominantly classified as Ferralsols (FRx) and Gleysols (Gle), typical of humid tropical forests, characterized by low fertility and high acidity, suitable only for short-term cultivation following forest clearing (Batjes NH 2007. SOTER-based soil parameter estimates for Central Africa - DR of Congo, Burundi and Rwanda(SOTWIScaf, version 1.0). Report 2007/02, ISRIC - World Soil Information, Wageningen). Vegetation within the project area comprises largely closed-canopy primary forest, while the surrounding landscapes include settlements, subsistence agriculture, and areas of secondary vegetation.

In the absence of the Lisala REDD+ Project, unplanned deforestation and forest degradation would be expected to continue across the concession. The primary drivers of deforestation would remain the expansion of slash-and-burn agriculture, driven by population growth and land scarcity; increasing charcoal production to meet regional energy demands; informal timber extraction for local use and informal trade; and infrastructure development occurring without integrated land-use planning. Without intervention, these dynamics would be expected to lead to progressive forest loss, fragmentation resulting in significant reductions in carbon stocks and posing severe threats to local biodiversity. These baseline dynamics have been modeled and quantified in the baseline scenario, reflecting the continuation of the trends and conditions prevailing prior to project initiation.

As the baseline scenario is consistent with the ongoing land-use dynamics existing prior to the start of the project, further details are provided in Section 3.1.4.

### 2.2.2 Most-Likely Scenario Justification (CCB, G2.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.2.3 Community and Biodiversity Additionality (CCB, G2.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.2.4 Benefits to be used as Offsets (CCB, G2.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 2.3 Safeguards and Stakeholder Engagement

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.1 Stakeholder Identification (VCS, 3.18, 3.19; CCB G1.5)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.2 Stakeholder Descriptions (VCS, 3.18, 3.19; CCB, G1.6, G1.13)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.3 Stakeholder Access to Project Documents (VCS, 3.18, 3.19; CCB, G3.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.4 Dissemination of Summary Project Documents (VCS, 3.18, 3.19; CCB, G3.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.5 Informational Meetings with Stakeholders (VCS, 3.18, 3.19; CCB, G3.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.6 Risks from the Project and No Net Harm (VCS, 3.18, 3.19)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.7 Community Costs, Risks, and Benefits (CCB, G3.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.8 Information to Stakeholders on Validation and Verification Process

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.9 Site Visit Information and Opportunities to Communicate with Auditor (VCS, 3.18.6; CCB, G3.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.10 Stakeholder Consultations (VCS, 3.18; CCB, G3.4)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.11 Continued Consultation and Adaptive Management (VCS, 3.18; CCB, G3.4)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.12 Stakeholder Consultation Channels (CCB, G3.5)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.13 Stakeholder Participation in Decision-Making and Implementation (VCS, 3.18, 3.19; CCB, G3.6)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.14 Anti-Discrimination Assurance (VCS 3.19; CCB, G3.7)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.15 Feedback and Grievance Redress Procedure (VCS, 3.18.4; CCB, G3.8)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.16 Accessibility of the Feedback and Grievance Redress Procedure (VCS, 3.19; CCB, G3.8)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.17 Worker Training (VCS, 3.19; CCB, G3.9)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.18 Community Employment Opportunities (VCS, 3.19.13; CCB, G3.10)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.3.19 Occupational Safety Assessment (VCS, 3.19; CCB, G3.12)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 2.4 Management Capacity

### 2.4.1 Project Governance Structures (CCB, G4.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.4.2 Required Technical Skills (VCS, 3.19; CCB, G4.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.4.3 Management Team Experience (VCS, 3.19; CCB, G4.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.4.4 Project Management Partnerships and Team Development (VCS, 3.19; CCB, G4.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.4.5 Financial Health of Implementing Organization(s) (CCB, G4.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.4.6 Avoidance of Corruption and Other Unethical Behavior (VCS, 3.19; CCB, G4.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.4.7 Commercially Sensitive Information (VCS, 3.5.2 – 3.5.4; CCB Rules, 3.5.13 – 3.5.14)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 2.5 Legal Status and Property Rights

### 2.5.1 National and Local Laws (VCS, 3.1, 3.6, 3.7, 3.14, 3.18, 3.19; CCB, G5.6)

The DRC has been committed to and has supported the REDD+ process since 2008, as evidenced by its early selection in the Forest Investment Program (FIP). The FIP is part of the national REDD+ process and serves as the primary source of funding to enable the country to enter an investment phase, undertake the large-scale operational deployment of REDD+, and launch the first sectoral transformation program in 2015. In 2012, the government adopted a national REDD+ strategy (CAFI,2012<sup>3</sup>), which outlines how it can meet its long-term development aspirations through a green economy. This strategy aims to stabilize forest cover across two-thirds of the country's area by 2030 and maintain it thereafter. More recently, the government has developed a large-scale REDD+ program for results-based payments in the

Mai-Ndombe province, with the goal of having a significant impact on the climate and delivering crucial development benefits, while generating unprecedented learning for the FCPF Carbon Fund.

The project is aligned with the ambitious goals of the FIP and draws inspiration from the actions implemented in Mai-Ndombe aimed at establishing a green development program.

Throughout the project period, Taranis Operations Limited (Project Proponent), Taranis Congo (concession owner) and **The Shared Wood Company Kongo** (Project Operator) will ensure that the project and all the activities are carried out in accordance with national and international regulations. The Lisala REDD+ Project complies with all applicable local, district, and national laws, regulations, and standards. Within the project area, none of the proposed project activities violates any law.

| <b>Description of process for obtaining consent</b> | <i>Describe and demonstrate how consent to implement the project activities was obtained from those concerned, including IPs, LCs, and customary rights holders, and a transparent agreement was reached.</i>                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Outcome of FPIC process</b>                      | <p><i>Describe the outcome of the FPIC process, including the transparent agreement, and the information disclosed prior to establishing a transparent agreement with those concerned, IPs, LCs, and customary rights holders.</i></p> <p><i>Provide assurance that:</i></p> <ul style="list-style-type: none"> <li><i>The project will not encroach on land, relocate people without consent, and force physical or economic displacement.</i></li> <li><i>Appropriate restitution or compensation has been allocated to any parties whose lands have been or will be affected by the project.</i></li> </ul> |

### 2.5.8 Benefit Sharing Mechanisms (VCS, 3.18, 3.19;)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                                                           |                                                                                                                                                                                                                                                                                                    |
|-----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Process used to design the benefit sharing plan</b>    | <i>Describe the process used to develop the benefit-sharing agreement with the affected stakeholder groups.</i>                                                                                                                                                                                    |
| <b>Summary of the benefit sharing plan</b>                | <i>Describe the benefit-sharing agreement. Where affected stakeholder groups wish to keep elements of the plan private, provide the full arrangement as a commercially sensitive document. The project proponent shall demonstrate that the community wishes to keep this information private.</i> |
| <b>Approval and dissemination of benefit sharing plan</b> | <i>Demonstrate that the benefit-sharing agreement was agreed up on by the affected stakeholder groups, and that the agreement was shared in a culturally appropriate manner. Demonstrate that the agreement is readily accessible should stakeholders wish to review the agreement.</i>            |

### 2.5.9 Property Rights Protection (VCS, 3.18, 3.19; CCB, G5.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.5.10 Illegal Activity Identification (VCS, 3.19; CCB, G5.4)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.5.11 Ongoing Disputes (VCS, 3.18, 3.19; CCB, G5.5)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.5.12 Approvals (CCB, G5.7)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.5.13 Double Counting and Participation under Other GHG Programs (VCS, 3.23; CCB G5.9)

#### 2.5.13.1 No Double Issuance

Is the project receiving or seeking credit for reductions and removals from a project activity under another GHG program, or any other form of community, social, or biodiversity unit or credit?

☐ Yes ☒ No

*If yes, provide required evidence of no double issuance as outlined by the VCS Standard and the CCB Standards. Include all relevant information about the community, social, or biodiversity credit.*

#### 2.5.13.2 Registration in Other GHG Programs

Has the project registered under any other GHG programs?

☐ Yes ☒ No

*If yes, provide the registration number and the date of project inactivity under the other GHG program.*

Is the project active under the other program?

☐ Yes ☒ No

*Project proponents, or their authorized representative, must attest that the project is no longer active in the other GHG program in the Registration Representation.*

#### 2.5.13.3 Projects Rejected by Other GHG Programs

Has the project been rejected by any other GHG programs?

☐ Yes ☒ No

*If yes, provide the program name(s), reason(s) and date for the rejection, justification of eligibility under the VCS Program, and any other relevant information.*

## 2.5.14 Double Claiming, Other Forms of Credit, and Scope 3 Emissions (VCS, 3.24)

### 2.5.14.1 No Double Claiming with Emissions Trading Programs or Binding Emission Limits

Are project reductions and removals or project activities also included in an emissions trading program or binding emission limit? See the *VCS Program Definitions* for definitions of emissions trading program and binding emission limit.

☐ Yes ☒ No

*If yes, provide all required evidence of no double claiming as outlined by the VCS Standard.*

### 2.5.14.2 No Double Claiming with Other Forms of Environmental Credit

Has the project activity sought, received, or is planning to receive credit from another GHG-related environmental credit system? See the *VCS Program Definitions* for definition of GHG-related environmental credit system.

☐ Yes ☒ No

*If yes, provide all required evidence of no double claiming as outlined by the VCS Standard.*

### 2.5.14.3 Supply Chain (Scope 3) Emissions

Do the project activities affect the emissions footprint of any product(s) (goods or services) that are part of a supply chain?

☐ Yes ☒ No

*If yes:*

Is the project proponent(s) or authorized representative a buyer or seller of the product(s) (goods or services) that are part of a supply chain?

☐ Yes ☐ No

*If yes:*

Has the project proponent(s) or authorized representative posted a public statement on their website saying, "Carbon credits may be issued through Verified Carbon Standard project [project ID] for the greenhouse gas emission reductions or removals associated with [project

proponent or authorized representative organization name(s)] [name of product(s) whose emissions footprint is changed by the project activities].”?

☐ Yes

☐ No

*If yes to all:*

*Provide evidence of the public statement. Evidence must be provided in this section or in an appendix.*

## 2.6 Additional Information Relevant to the Project

### 2.6.1 Leakage Management (VCS, 3.11, 3.15)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 2.6.2 Further Information

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 3.1 Application of Methodology

### 3.1.1 Title and Reference of Methodology (VCS, 3.1)

| Type (methodology, tool, module) | Reference ID (if applicable) | Title                                                                                                                                 | Version |
|----------------------------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|---------|
| Methodology                      | VM0007                       | REDD+ Methodology Framework (REDD+ MF)                                                                                                | 1.8     |
| Tool                             | VT0001                       | Tool for the Demonstration and Assessment of Additionality in VCS Agriculture, Forestry and Other Land Use (AFOLU) Project Activities | 3.0     |

|        |         |                                                                                                                                        |     |
|--------|---------|----------------------------------------------------------------------------------------------------------------------------------------|-----|
| Module | VMD0001 | Estimation of carbon stocks in the above- and belowground biomass in live tree and non-tree pools (CP-AB)                              | 1.1 |
| Module | VMD0007 | Estimation of baseline carbon stock changes and GHG emissions from unplanned deforestation and unplanned wetland degradation (BL-UP)   | 3.3 |
| Module | VMD0010 | Estimation of emissions from activity shifting for avoided unplanned deforestation and avoiding unplanned wetland degradation (LK-ASU) | 1.2 |
| Module | VMD0013 | Estimation of GHG emissions from biomass and peat burning (E-BPB)                                                                      | 1.2 |
| Module | VMD0015 | Methods for monitoring of GHG emissions and removals (M-REDD)                                                                          | 2.2 |
| Module | VMD0016 | Methods for stratification of the project area (X-STR)                                                                                 | 1.2 |
| Module | VMD0017 | Estimation of uncertainty for REDD project activities (X-UNC)                                                                          | 2.2 |
| Tool   | NPRT    | AFOLU Non-Permanence Risk Tool                                                                                                         | 4.2 |

### 3.1.2 Applicability of Methodology (VCS, 3.1)

| Reference ID/Title | Applicability condition                                                                                                                                 | Justification of conformance                                                                                                                                                                   |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| VM0007 [1]         | Land in the project area has qualified as forest for at least the 10 years prior to the project start date. Mangroves excluded from height requirement. | Land in the project area has qualified as forest for at least the 10 years (i.e. before 2014) prior to the project start date (2025), as confirmed by the Joint Research Centre (JRC) Tropical |

|            |                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                                                                                                                                                                                                | Moist Forest (TMF) dataset <sup>4</sup> , which serves as the forest benchmark map. No mangroves are present in the project area.                                                                                                                                                                                                                                                                                                                                                                                                          |
| VM0007 [2] | Where land within the project area is peatland or tidal wetlands and emissions from the SOC pool are deemed significant, the relevant WRC modules are applied alongside other relevant modules | Peatlands have been identified in portions of the project area using peat thickness and extent data provided by Crezee et al. (2022). In accordance with VM0007 requirements, a significance assessment of potential Soil Organic Carbon (SOC) emissions from these peat areas has been conducted using the test described in Annex 1 of VM0007. The results demonstrated that the anticipated SOC emissions are deemed not significant (de minimis). As a result, the Wetlands Restoration and Conservation (WRC) modules are not applied |
| VM0007 [3] | Baseline deforestation is unplanned (AUDef) or planned (APDef).                                                                                                                                | The baseline deforestation is unplanned (AUDef), primarily driven by shifting agriculture, charcoal production, and fuelwood collection.                                                                                                                                                                                                                                                                                                                                                                                                   |
| VM0007 [4] | Flooding agricultural lands or intensifying livestock production via feed-lots or manure lagoons for leakage prevention is not allowed.                                                        | Project activities do not involve flooding agricultural lands or livestock intensification. Proposed land uses include agroforestry and low-intensity subsistence agriculture.                                                                                                                                                                                                                                                                                                                                                             |
| VM0007 [5] | Baseline agents of deforestation: clear land for tree harvesting or small-scale ag., lack legal right to deforest, and are residents or immigrants.                                            | Baseline agents are local households practicing slash-and-burn agriculture without formal land tenure.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| VM0007 [6] | Post-deforestation land use is reforestation                                                                                                                                                   | Not applicable. The baseline post-deforestation land use is agricultural expansion, not reforestation.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| VT0001 [1] | AFOLU activities same or similar to the proposed activity must not violate any applicable law, even if not enforced.                                                                           | All AFOLU activities implemented in the project comply with national and provincial laws of the Democratic Republic of Congo, including forestry, land tenure, and environmental regulations. Legal compliance has been assessed and documented in the legal compliance section.                                                                                                                                                                                                                                                           |
| VT0001 [2] | Use of this tool requires the baseline methodology to justify the most plausible baseline scenario with a                                                                                      | The REDD baseline scenario has been developed following the stepwise approach outlined in the VCS guidance and REDD-MF methodology, where multiple alternatives were                                                                                                                                                                                                                                                                                                                                                                       |

|             |                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                 |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             | stepwise approach.                                                                                                                                                                                     | evaluated before selecting the most plausible baseline scenario.                                                                                                                                                                                                                                                |
| VMD0001 [1] | This module is applicable to all forest types and age classes.                                                                                                                                         | The module is applicable as the project area comprises tropical moist forests.                                                                                                                                                                                                                                  |
| VMD0007 [1] | Applicable for estimating baseline emissions from unplanned deforestation in forest land converting to non-forest land. Landscape can be mosaic, transition, or frontier.                              | The module applies as the project baseline includes unplanned deforestation with patterns matching transition configurations, as evidenced by historical spatial analysis of deforestation.                                                                                                                     |
| VMD0007 [2] | Baseline agents: (i) clear land for settlements, agriculture, ranching or aquaculture (not large-scale); (ii) lack legal right to deforest; (iii) are residents or immigrants in the reference region. | Baseline deforestation agents in the reference region are primarily smallholder farmers and charcoal producers. They operate without legal rights to clear land and are either local residents or migrants.                                                                                                     |
| VMD0010 [1] | Applicable for estimating carbon stock changes and GHG emissions from displaced activities causing deforestation or wetland degradation outside the project area.                                      | The project applies this module to estimate carbon stock changes and GHG emissions from potential displacement of deforestation activities outside the project area.                                                                                                                                            |
| VMD0010 [2] | Activities subject to displacement include conversion of forest land to grazing/cropland/other land uses, or conversion of intact/partially degraded wetlands to drained/degraded wetlands.            | Potential displaced activities include primarily the conversion of forest land to cropland, driven by local agricultural expansion pressures.                                                                                                                                                                   |
| VMD0010 [3] | Mandatory if module BL-UP is used to define the baseline ; full compliance with BL-UP applicability conditions required.                                                                               | Module BL-UP is used in this project. All associated applicability conditions are met.                                                                                                                                                                                                                          |
| VMD0013 [1] | Applicable to REDD project activities with emissions from biomass burning.                                                                                                                             | Biomass burning could occur in the baseline due to slash-and-burn agriculture and occasional uncontrolled fires. Inclusion of fire emissions in the baseline is optional under this module. The project is evaluating whether to include these emissions in baseline accounting or conservatively exclude them. |
| VMD0015 [1] | Strata as defined in baseline modules are fixed and may not be changed without baseline revision.                                                                                                      | Baseline strata differentiating mineral soils and peatlands have been established during initial project design under the REDD+ MF methodology. No changes will occur unless a                                                                                                                                  |

|             |                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                    |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             |                                                                                                                                                | formal baseline revision is undertaken.                                                                                                                                                                                                                                                                                            |
| VMD0015 [2] | Requirements for logging activities                                                                                                            | Not applicable. No logging activities are planned within the project boundary.                                                                                                                                                                                                                                                     |
| VMD0016 [1] | Module must be used to delineate peat vs non-peat and stratify peat by depth and emission characteristics unless SOC emissions are de minimis. | Peat vs. non-peat zones have been delineated using peat thickness and extent data from Crezee et al. (2022). An assessment of the significance of SOC emissions was conducted following the test described in Annex 1 of VM0007, which determined that anticipated SOC emissions are de minimis in the context of the methodology. |
| VMD0017 [1] | Mandatory module when using REDD+ MF methodology, applicable for estimating uncertainty in emissions/removals from REDD and WRC activities.    | The project uses the REDD+ MF methodology, therefore application of VMD0017 is mandatory. The project complies with this requirement.                                                                                                                                                                                              |
| VMD0017 [2] | Covers uncertainties in deforestation/degradation rates, carbon pool stock estimates and changes, peat emissions, and project emissions.       | The project's uncertainty assessment includes deforestation rates, carbon stock estimates, and project emissions, ensuring that all parameters required by the module are covered.                                                                                                                                                 |
| VMD0017 [3] | If uncertainty value is unknown or not easily calculable, a justified conservative estimate can be used, including 0% if indisputable.         | Where field data is not available, the project uses conservative estimates based on peer-reviewed literature and IPCC defaults.                                                                                                                                                                                                    |
| VMD0017 [4] | A 95% confidence interval with a half-width $\leq 15\%$ of the recorded value must be targeted, particularly for carbon stock measurements.    | The sampling design for forest carbon stocks inventory and estimation targets a 95% confidence level and $\leq 15\%$ relative precision. Random sampling, sample size optimization, and QA/QC procedures support this objective, in accordance with REDD+ MF requirements.                                                         |

### 3.1.3 Project Boundary (VCS, 3.12)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

| Source                | Gas | Included? | Justification/explanation |
|-----------------------|-----|-----------|---------------------------|
| Base line<br>Source 1 | CO2 |           |                           |

| Source |          | Gas              | Included? | Justification/explanation |
|--------|----------|------------------|-----------|---------------------------|
|        |          | CH <sub>4</sub>  |           |                           |
|        |          | N <sub>2</sub> O |           |                           |
|        |          | Other            |           |                           |
|        | Source 2 | CO <sub>2</sub>  |           |                           |
|        |          | CH <sub>4</sub>  |           |                           |
|        |          | N <sub>2</sub> O |           |                           |
|        |          | Other            |           |                           |
|        | Project  | CO <sub>2</sub>  |           |                           |
|        |          | CH <sub>4</sub>  |           |                           |
|        |          | N <sub>2</sub> O |           |                           |
|        |          | Other            |           |                           |
|        |          | CO <sub>2</sub>  |           |                           |
|        |          | CH <sub>4</sub>  |           |                           |
|        |          | N <sub>2</sub> O |           |                           |
|        |          | Other            |           |                           |

*Provide a diagram or map of the project boundary, showing clearly the physical locations of the various installations or management activities taking place as part of the project activity based on the description provided in Section 2.1.1 (Description of the Project Activity) above.*

*Include in the diagram or map the locations of where the various measures are taking place, and any reference areas and leakage belts.*

### 3.1.4 Baseline Scenario (VCS, 3.13)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 3.1.5 Additionality (VCS, 3.14)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 3.1.5.1 Regulatory Surplus (VCS, 3.14)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 3.1.5.2 Additionality Methods (VCS, 3.14)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 3.1.6 Methodology Deviations (VCS, 3.20)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 3.2 Quantification of Estimated GHG Emission Reductions and Removals

#### 3.2.1 Baseline Emissions (VCS, 3.15)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 3.2.2 Project Emissions (VCS, 3.15)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 3.2.3 Leakage Emissions (VCS 2.5, 3.2, 3.6, 3.15, 4.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 3.2.4 Estimated GHG Emission Reductions and Carbon Dioxide Removals (VCS, 3.15, 4.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                                                                                                           |                                                                                                  |
|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| <b>State the non-permanence risk rating (%)</b>                                                           | <i>Example: 20%</i>                                                                              |
| <b>Has the non-permanence risk report been attached as either an appendix or a separate document?</b>     | <input type="checkbox"/> Yes <input type="checkbox"/> No                                         |
| <b>For ARR and IFM projects with harvesting, state, in tCO<sub>2</sub>e, the Long-term Average (LTA).</b> |                                                                                                  |
| <b>Has the LTA been updated based on monitored data, if applicable?</b>                                   | <input type="checkbox"/> Yes <input type="checkbox"/> No<br><i>If no, provide justification.</i> |
| <b>State, in tCO<sub>2</sub>e, the expected total GHG benefit to date.</b>                                |                                                                                                  |
| <b>Is the number of GHG credits issued below the LTA?</b>                                                 | <input type="checkbox"/> Yes <input type="checkbox"/> No<br><i>If no, provide justification.</i> |

Complete the table below for the project crediting period. Note that the buffer pool allocation is split proportionally between the estimated reductions and removals. (For example, if a project is estimated to achieve 20,000 tCO<sub>2</sub>e removals and 80,000 tCO<sub>2</sub>e reductions and has a buffer contribution of 20%, or 20,000, the estimated removal VCUs would be 16,000 and reduction VCUs would be 64,000.)

| Vintage period                            | Estimated baseline emissions (tCO <sub>2</sub> e) | Estimated project emissions (tCO <sub>2</sub> e) | Estimated leakage emissions (tCO <sub>2</sub> e) | Estimated buffer pool allocation (tCO <sub>2</sub> e) | Estimated reduction VCUs (tCO <sub>2</sub> e) | Estimated removal VCUs (tCO <sub>2</sub> e) | Estimated total VCU issuance (tCO <sub>2</sub> e) |

| Value applied                                                                                | Provide the value applied                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Justification of choice of data or description of measurement methods and procedures applied | Justify the choice of data source, providing references where applicable. Where values are based on measurement, include a description of the measurement methods and procedures applied (e.g., what standards or protocols have been followed), indicate the responsible person/entity that undertook the measurement, the date of the measurement and the measurement results. More detailed information may be provided in an appendix. |
| Purpose of data                                                                              | Indicate one of the following: <ul style="list-style-type: none"> <li>Determination of baseline scenario (AFOLU projects only)</li> <li>Calculation of baseline emissions</li> <li>Calculation of project emissions</li> <li>Calculation of leakage</li> </ul>                                                                                                                                                                             |
| Comments                                                                                     | Provide any additional comments                                                                                                                                                                                                                                                                                                                                                                                                            |

#### 3.3.2 Data and Parameters Monitored (VCS, 3.16)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                                                                        |                                                                                                                                                                                                                                                                                                            |
|------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Data / parameter</b>                                                |                                                                                                                                                                                                                                                                                                            |
| <b>Data unit</b>                                                       | <i>Indicate the unit of measure</i>                                                                                                                                                                                                                                                                        |
| <b>Description</b>                                                     | <i>Provide a brief description of the data/parameter</i>                                                                                                                                                                                                                                                   |
| <b>Source of data</b>                                                  | <i>Indicate the source(s) of data</i>                                                                                                                                                                                                                                                                      |
| <b>Description of measurement methods and procedures to be applied</b> | <i>Specify the measurement methods and procedures, any standards or protocols to be followed, and the person/entity responsible for the measurement. Include any relevant information regarding the accuracy of the measurements (e.g., accuracy associated with meter equipment or laboratory tests).</i> |
| <b>Frequency of monitoring/recording</b>                               | <i>Specify measurement and recording frequency</i>                                                                                                                                                                                                                                                         |
| <b>Value applied</b>                                                   | <i>Provide an estimated value for the data/parameter</i>                                                                                                                                                                                                                                                   |
| <b>Monitoring equipment</b>                                            | <i>Identify equipment used to monitor the data/parameter including type, accuracy class, and serial number of equipment, as appropriate.</i>                                                                                                                                                               |
| <b>QA/QC procedures to be applied</b>                                  | <i>Describe the quality assurance and quality control (QA/QC) procedures to be applied, including the calibration procedures where applicable.</i>                                                                                                                                                         |
| <b>Purpose of data</b>                                                 | <i>Indicate one of the following:</i> <ul style="list-style-type: none"> <li>• <i>Calculation of baseline emissions</i></li> <li>• <i>Calculation of project emissions</i></li> <li>• <i>Calculation of leakage</i></li> </ul>                                                                             |
| <b>Calculation method</b>                                              | <i>Where relevant, provide the calculation method, including any equations, used to establish the data/parameter.</i>                                                                                                                                                                                      |
| <b>Comments</b>                                                        | <i>Provide any additional comments</i>                                                                                                                                                                                                                                                                     |

### 3.3.3 Monitoring Plan (VCS, 3.16, 3.20)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 3.3.4 Dissemination of Monitoring Plan and Results (VCS, 3.18; CCB, CL4.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 3.4 Optional Criterion: Climate Change Adaptation Benefits

### 3.4.1 Regional Climate Change Scenarios (CCB, GL1.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 3.4.2 Climate Change Impacts (CCB, GL1.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 3.4.3 Measures Needed and Designed for Adaptation (CCB, GL1.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

# 4 COMMUNITY

## 4.1 Without-Project Community Scenario

### 4.1.1 Descriptions of Communities at Project Start (CCB, CM1.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 4.1.2 Interactions between Communities and Community Groups (VCS, 3.19; CCB, CM1.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 4.1.3 High Conservation Values (CCB, CM1.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                                |                                                                                                       |
|--------------------------------|-------------------------------------------------------------------------------------------------------|
| <b>High Conservation Value</b> | <i>Specify HCV (e.g., name the hydrological service, food source, or culturally significant area)</i> |
| <b>Qualifying Attribute</b>    | <i>Provide rationale for its significance for community well-being</i>                                |
| <b>Focal Area</b>              | <i>Identify the area(s) that need to be managed to maintain or enhance this HCV</i>                   |

#### 4.1.4 Without-Project Scenario: Community (CCB, CM1.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 4.2 Net Positive Community Impacts

### 4.2.1 Expected Community Impacts (CCB, CM2.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                                  |                                                                                                                              |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>Community group</b>           | <i>Identify group</i>                                                                                                        |
| <b>Impact(s)</b>                 | <i>Identify impact(s)</i>                                                                                                    |
| <b>Type of benefit/cost/risk</b> | <i>Describe whether each impact is predicted or actual, direct or indirect, and whether it is a benefits, a cost or risk</i> |
| <b>Change in well-being</b>      | <i>Describe type and magnitude of each impact</i>                                                                            |

### 4.2.2 Negative Community Impact Mitigation (VCS, 3.19; CCB, CM2.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 4.2.3 Net Positive Community Well-Being (VCS, 3.19; CCB, CM2.3, GL1.4)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 4.2.4 High Conservation Values Protected (CCB, CM2.4)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 4.3 Other Stakeholder Impacts

#### 4.3.1 Impacts on Other Stakeholders (VCS, 3.18, 3.19; CCB, CM3.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 4.3.2 Mitigation of Negative Impacts on Other Stakeholders (VCS, 3.18, 3.19; CCB, CM3.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 4.3.3 Net Impacts on Other Stakeholders (VCS, 3.18, 3.19; CCB, CM3.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 4.4 Community Impact Monitoring

#### 4.4.1 Community Monitoring Plan (CCB, CM4.1, CM4.2, GL1.4, GL2.2, GL2.3, GL2.5)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 4.4.2 Monitoring Plan Dissemination (CCB, CM4.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 4.5 Optional Criterion: Exceptional Community Benefits

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 4.5.1 Exceptional Community Criteria (CCB, GL2.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 4.5.2 Short-term and Long-term Community Benefits (CCB, GL2.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 4.5.3 Community Participation Risks (CCB, GL2.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 4.5.4 Marginalized and/or Vulnerable Community Groups (CCB, GL2.4)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                             |                                                                                                                                                                                                                                                                                        |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Community Group</b>      | <i>Identify the community group</i>                                                                                                                                                                                                                                                    |
| <b>Net positive impacts</b> | <i>Demonstrate that the project activities are anticipated to generate net positive impacts on the well-being of all identified marginalized and/or vulnerable community groups</i>                                                                                                    |
| <b>Benefit access</b>       | <i>Demonstrate that any barriers or risks that might prevent benefits going to marginalized and/or vulnerable smallholder/community members have been identified and addressed</i>                                                                                                     |
| <b>Negative impacts</b>     | <i>Demonstrate which measures will be taken to identify any marginalized and/or vulnerable smallholders/community members, whose well-being may be negatively affected by the project, and that measures will be taken to avoid, or when unavoidable to mitigate, any such impacts</i> |

#### 4.5.5 Net Impacts on Women (CCB, GL2.5)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 4.5.6 Benefit Sharing Mechanisms (CCB, GL2.6)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                                                           |                                                                                                                                                                                                                                                                                                    |
|-----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Process used to design the benefit sharing plan</b>    | <i>Describe the process used to develop the benefit-sharing agreement with the affected stakeholder groups.</i>                                                                                                                                                                                    |
| <b>Summary of the benefit sharing plan</b>                | <i>Describe the benefit-sharing agreement. Where affected stakeholder groups wish to keep elements of the plan private, provide the full arrangement as a commercially sensitive document. The project proponent shall demonstrate that the community wishes to keep this information private.</i> |
| <b>Approval and dissemination of benefit sharing plan</b> | <i>Demonstrate that the benefit-sharing agreement was agreed up on by the affected stakeholder groups, and that the agreement was shared in a culturally appropriate manner. Demonstrate that the agreement is readily accessible should stakeholders wish to review the agreement.</i>            |

#### 4.5.7 Benefits, Costs, and Risks Communication (VCS, 3.18; CCB, GL2.7)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 4.5.8 Governance and Implementation Structures (CCB, GL2.8)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

#### 4.5.9 Smallholders/Community Members Capacity Development (CCB, GL2.9)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 5 BIODIVERSITY

### 5.1 Without-Project Biodiversity Scenario

#### 5.1.1 Existing Conditions (VCS, 3.19; CCB, B1.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                                              |                                                                                                                                                               |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Species and habitat</b>                   | <i>Demonstrate that the project will not adversely impact habitats and areas needed for habitat connectivity for rare, threatened, or endangered species.</i> |
| <b>Areas needed for habitat connectivity</b> | <i>Demonstrate that the project will not adversely impact any areas needed for habitat connectivity</i>                                                       |
| ...                                          | ...                                                                                                                                                           |

### 5.1.2 High Conservation Values (CCB, B1.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                                |                                                                                                                                                                                            |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>High conservation value</b> | <i>Specify HCV (e.g., name the area and species it supports).</i>                                                                                                                          |
| <b>Qualifying attribute</b>    | <i>Provide rationale (e.g., if there are significant species concentrations or viable populations in natural patterns of distribution and abundance or threatened or rare ecosystems).</i> |
| <b>Focal area</b>              | <i>Identify the area(s) that need to be managed to maintain or enhance this HCV.</i>                                                                                                       |

### 5.1.3 Without-project Scenario: Biodiversity (CCB, B1.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 5.2 Net Positive Biodiversity Impacts

### 5.2.1 Expected Biodiversity Changes (VCS, 3.19; CCB, B2.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                             |                         |
|-----------------------------|-------------------------|
| <b>Biodiversity element</b> | <i>Identify element</i> |
|-----------------------------|-------------------------|

|                                |                                                                                                    |
|--------------------------------|----------------------------------------------------------------------------------------------------|
| <b>Estimated change</b>        | <i>Identify change</i>                                                                             |
| <b>Justification of change</b> | <i>Describe the factors contributing to the change and methods used to estimate or document it</i> |

### 5.2.2 Mitigation Measures (VCS, 3.19; CCB, B2.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 5.2.3 Net Positive Biodiversity Impacts (CCB, B2.2, GL1.4)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 5.2.4 High Conservation Values Protected (CCB, B2.4)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 5.2.5 Species Used (VCS, 3.19; CCB, B2.5, B2.6)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

| Species introduced | Classification | Justification for use | Adverse effects and mitigation |
|--------------------|----------------|-----------------------|--------------------------------|
|                    |                |                       |                                |
|                    |                |                       |                                |
|                    |                |                       |                                |

### 5.2.6 Invasive Species (VCS, 3.19; CCB, B2.5)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                                  |                                                                                             |
|----------------------------------|---------------------------------------------------------------------------------------------|
| <b>Existing invasive species</b> | <b>Mitigation measures to prevent the spread or continued existence of invasive species</b> |
|----------------------------------|---------------------------------------------------------------------------------------------|

|  |  |
|--|--|
|  |  |
|  |  |
|  |  |

### 5.2.7 GMO Exclusion (CCB, B2.7)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 5.2.8 Inputs Justification (VCS, 3.19; CCB, B2.8)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                                 |                                                                                             |
|---------------------------------|---------------------------------------------------------------------------------------------|
| <b>Name</b>                     | <i>Identify input</i>                                                                       |
| <b>Justification of use</b>     | <i>Justify use</i>                                                                          |
| <b>Potential adverse effect</b> | <i>Describe the possible adverse effects on the region's environment and/or communities</i> |

### 5.2.9 Waste Products (VCS, 3.19; CCB, B2.9)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 5.3 Offsite Biodiversity Impacts

### 5.3.1 Negative Offsite Biodiversity Impacts (CCB, B3.1) and Mitigation Measures (CCB, B3.2)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                                |                              |
|--------------------------------|------------------------------|
| <b>Negative offsite impact</b> | <b>Mitigation measure(s)</b> |
|--------------------------------|------------------------------|

|                                                           |                                                                              |
|-----------------------------------------------------------|------------------------------------------------------------------------------|
| <i>Identify potential negative impact on biodiversity</i> | <i>Describe the measures needed and designed to mitigate negative impact</i> |
|                                                           |                                                                              |

### 5.3.2 Net Offsite Biodiversity Benefits (VCS, 3.19; CCB, B3.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 5.4 Biodiversity Impact Monitoring

### 5.4.1 Biodiversity Monitoring Plan (CCB, B4.1, B4.2, GL1.4, GL3.4)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 5.4.2 Biodiversity Monitoring Plan Dissemination (CCB, B4.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

## 5.5 Optional Criterion: Exceptional Biodiversity Benefits

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 5.5.1 High Biodiversity Conservation Priority Status (CCB, GL3.1)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

### 5.5.2 Trigger Species Population Trends (CCB, GL3.2, GL3.3)

This section is under development. In accordance with the VCS Registration and Issuance Process v4.6, all information will be finalized and included prior to the validation.

|                        |                         |
|------------------------|-------------------------|
| <b>Trigger species</b> | <i>Identify species</i> |
|------------------------|-------------------------|

|                                             |                                                                                                                                                                                                                                                                                       |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Population trend at start of project</b> | <i>Describe recent population trend in the project zone at the start of the project. Estimate numbers, if possible</i>                                                                                                                                                                |
| <b>Without-project scenario</b>             | <i>Describe the most likely changes under the without-project land use scenario</i>                                                                                                                                                                                                   |
| <b>With-project scenario</b>                | <i>Describe measures needed and designed to maintain or enhance the population status of each trigger species in the project zone, and to reduce the threats to them. If possible, estimate the number of this species that will be in the project zone at the end of the project</i> |

## APPENDIX 1: STAKEHOLDER DESCRIPTION TABLE

Use this appendix, if necessary, to identify stakeholders and fulfill Section 2.3.2 above. Modify the table, if necessary, to suit the project activities, or delete if not used.

| Stakeholder                                                                                                                 | Rights, interest, and overall relevance to the project |
|-----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|
| Identify communities and any community groups within them, any cross-cutting community groups, and list other stakeholders. |                                                        |
|                                                                                                                             |                                                        |
|                                                                                                                             |                                                        |
|                                                                                                                             |                                                        |
|                                                                                                                             |                                                        |

## APPENDIX 2: PROJECT ACTIVITIES AND THEORY OF CHANGE TABLE

*Use this appendix, if applicable, to identify project activities and fulfill the requirements of Section 2.1.17 above. This is an example of just one method of representing the theory of change. Results chains/flow diagrams are another effective way to represent the theory of change. Modify the table, if necessary, to suit the project activities, or delete if not used.*

| Activity description | Expected climate, community, and/or biodiversity |                           |                        | Relevance to project's objectives |
|----------------------|--------------------------------------------------|---------------------------|------------------------|-----------------------------------|
|                      | Outputs<br>(short term)                          | Outcomes<br>(medium term) | Impacts<br>(long term) |                                   |
|                      |                                                  |                           |                        |                                   |
|                      |                                                  |                           |                        | -                                 |
|                      |                                                  |                           |                        | -                                 |

## APPENDIX 3: PROJECT RISKS TABLE

Use this appendix to identify and summarize the project risks and fulfill the requirements of Sections 2.3.6, 2.3.17, 2.5, and 5.2.1– 5.2.9, above. Where no risk is identified, write ‘No risk identified’ and provide justification in the third column. Add rows as needed.

|                                                                                                                                               | Identified risk(s) | Potential impact of risk on stakeholders, ecosystem health, and biodiversity | Mitigation or preventative measure(s) taken |
|-----------------------------------------------------------------------------------------------------------------------------------------------|--------------------|------------------------------------------------------------------------------|---------------------------------------------|
| Natural and human induced risks to stakeholders’ wellbeing                                                                                    |                    |                                                                              |                                             |
| Risks to stakeholder participation                                                                                                            |                    |                                                                              |                                             |
| Working conditions                                                                                                                            |                    |                                                                              |                                             |
| Safety of women and girls                                                                                                                     |                    |                                                                              |                                             |
| Safety of minority and marginalized groups, including children                                                                                |                    |                                                                              |                                             |
| Pollutants (air, noise, discharges to water, generation of waste, and release of hazardous materials and chemical pesticides and fertilizers) |                    |                                                                              |                                             |
| Discrimination                                                                                                                                |                    |                                                                              |                                             |

|                                                                                                                                                                                                            |  |  |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Sexual harassment                                                                                                                                                                                          |  |  |  |
| Equal pay for equal work                                                                                                                                                                                   |  |  |  |
| Gender equity in labor and work                                                                                                                                                                            |  |  |  |
| Forced labor <sup>5</sup>                                                                                                                                                                                  |  |  |  |
| Child labor                                                                                                                                                                                                |  |  |  |
| Human trafficking                                                                                                                                                                                          |  |  |  |
| Recognition of, respect of, and promotion of the rights to IPs, LCs and customary rights holders                                                                                                           |  |  |  |
| Preserving and protecting cultural heritage                                                                                                                                                                |  |  |  |
| Protecting and preserving property rights, customary rights, or protecting legal or customary tenure/access rights to territories, property, and resources, including collective and/or conflicting rights |  |  |  |

<sup>5</sup> The identified risks and commensurate mitigation or preventative measure(s) for forced labor, child labor, and human trafficking, must be inclusive of staff and contracted workers employed by third parties.

|                                                                                                   |  |  |  |
