

North Star

Article6 — where we're going and what matters.

Mission

Make carbon credit verification defensible, traceable, and fast — without losing rigor.

What we are

A verification factory that gets smarter from every paid review.

What we are not

- Not "AI for carbon"
- Not a static SaaS tool
- Not a generic AI platform
- Not a consultancy deck with software attached

The loop

Paid verification → revenue + decision traces → product gets smarter → next verification faster/more defensible → compound.

Target

- First 5 pilots: \$1,500-2,500 per methodology verification
- After 3 case studies with 60-70% time savings: \$5K
- VVBs charge \$50-100K/engagement — we save them weeks

Wedge

Forestation/reforestation (ARR) verification for VVBs. One wedge. Own it.

Scarce asset

High-quality adjudication data from real reviewers on real rules. Not GPUs. Not PDFs. Not prompts. Decision traces.

Moat

Live verifier workflow access. Decision history. Rule-level evidence. Audit events. Cross-project patterns. Differentiated access to context feedback loops.

Culture

Truth-seeking. No fake verification. No performative AI. Smallest real improvement. Reviewer trust over flashy UX.

Key numbers

- ~80 VVBs active in Article 6
- ~20 forestry-focused
- VVBs charge \$50-1000K per engagement
- Verification takes weeks manually
- Our target: hours with an auditable trail
