Section 4Applicability Conditions

- ✓

REDD forest land definition

Passed

Project land must meet forest definition threshold for 10+ years. Mangroves exempt from height.

“The project area complies with this condition as mentioned in Section 1.10, with complete forest cover demonstrated for the years 2002 and 2012.”

PDD Section 2.2 Applicability of Methodology • Page 32 • proj-desc-1382:p32:b890
- ✓

REDD baseline deforestation category

Passed

Binary classification: unplanned (no legal right) vs planned (legally permitted conversion). Determines which BL module applies.

“This project is eligible as an avoiding planned deforestation project because the forest land is expected to be converted to non-forest land in the baseline case and the land is legally permitted to be converted to non-forest.”

PDD Section 2.1 Title and Reference of Methodology • Page 31 • proj-desc-1382:p31:b780
- ?

AUDef agent criteria

Needs review

Three criteria must ALL be met. Excludes large-scale industrial agriculture/aquaculture.

“The above modules are applicable because they meet the applicability conditions of the modules as set out below. REDD-MF, REDD Methodology Framework. Table 2.1. Applicability Conditions and Justifications for the REDD Methodology Framework Module.”

PDD Section 2.2 Applicability of Methodology • Page 32
- ✓

APDef legal authorization

Passed

Must have legal documentation authorizing conversion.

“JR Agropecuária e Empreendimentos has provided 'Certificado de Regularidade do FGRS – CRF' and the 'CERTIDÃO NEGATIVA DE DÉBITOS RELATIVOS ÀS CONTRIBUIÇÕES PREVIDENCIÁRIAS E ÀS DE TERCEIROS'.”

PDD Section 1.11 Compliance with Laws • Page 27 • proj-desc-1382:p27:b745

—	WRC water table prohibition	N/A
Water table lowering is prohibited except for two specific exceptions.		
Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.		
—	WRC organic soil burning prohibition	N/A
Absolute prohibition on organic soil burning as a project activity.		
Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.		
—	WRC nitrogen fertilizer prohibition	N/A
No nitrogen fertilizer application allowed during entire crediting period.		
Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.		
—	WRC hydrological connectivity check	N/A
Spillover emissions from hydrological changes must be assessed using the stepwise significance procedure in Appendix 1 (alternative to T-SIG). Procedure covers GHG emissions by source, carbon stock changes by pool, and leakage GHG emissions.		
Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.		
?	RWE prior land use requirement	Needs review
Three alternative conditions. Must demonstrate one with verifiable evidence.		
<i>“The above modules are applicable because they meet the applicability conditions of the modules as set out below. REDD-MF, REDD Methodology Framework. Table 2.1. Applicability Conditions and Justifications for the REDD Methodology Framework Module.”</i>		
PDD Section 2.2 Applicability of Methodology • Page 32		
✓	Peatland VCS definition	Passed
Must meet VCS peatland definition based on IPCC organic soil thresholds.		
<i>“As demonstrated in Figure 1.4, no organic soils (or peatlands) exist within the project area. Further, soil carbon has been conservatively excluded as stated in section 2.3.”</i>		
PDD Section 2.2 Applicability of Methodology • Page 32 • proj-desc-1382:p32:b905		
—	Tidal wetland restoration activities	N/A
Must include at least one defined restoration activity type.		
Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.		
—	CIW tidal wetland conservation activities	N/A
Must include at least one defined conservation activity type.		
Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.		
—	AUWD agent criteria	N/A
Parallel to AUDef criteria but for wetland degradation.		
Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.		
✓	IFM and ARR exclusion	Passed

IFM and ARR activities are excluded from VM0007. WRC projects that also implement ARR activities must use an appropriate ARR methodology, e.g. VM0047, for aboveground biomass accounting.

“The only eligible activity as part of this project is avoiding planned deforestation, hence only modules related to planned deforestation are required.”

PDD Section 2.1 Title and Reference of Methodology • Page 31 • proj-desc-1382:p31:b845

? Leakage prevention activity restrictions

Needs review

Two specific leakage prevention activities are explicitly prohibited.

“The above modules are applicable because they meet the applicability conditions of the modules as set out below. REDD-MF, REDD Methodology Framework. Table 2.1. Applicability Conditions and Justifications for the REDD Methodology Framework Module.”

PDD Section 2.2 Applicability of Methodology • Page 32

Section 5 Project Boundary 10 2 4

✓ Geographic boundary definition

Passed

Six required data elements for each discrete land parcel.

“The Envira Amazonia Project area is located in Acre, Brazil along the banks of the Jurupari River. The total project area is 39,300.6 hectares.”

PDD Section 1.9 Project Location • Page 10 • proj-desc-1382:p10:b291

✓ No spatial overlap between baselines

Passed

Strict no-overlap rule. REDD+WRC combination is the sole exception.

“The project boundary is defined by the legal property boundaries. No spatial overlap with other VCS projects exists.”

PDD Section 2.3 Project Boundary • Page 35 • proj-desc-1382:p35:b770

✓ Exclusion of land in other GHG programs

Passed

Double-counting prevention. Must track and report exclusions.

“The Envira Amazonia Project has not been registered, nor is seeking registration, under any other GHG programs.”

PDD Section 1.12.4 Participation under Other GHG Programs • Page 30 • proj-desc-1382:p30:b808

✓ REDD reference region definition

Passed

RRD required for baseline modeling. Must be in same jurisdiction with similar characteristics.

“The reference region includes the State of Acre which has similar forest types, deforestation drivers, and jurisdictional characteristics.”

PDD Section 2.3 Project Boundary • Page 35 • proj-desc-1382:p35:b770

? REDD proxy area definition

Needs review

Proxy areas required for planned deforestation baseline.

“The project area is 39,300.6 hectares of tropical forest located in Acre, Brazil. The project boundary is defined by the legal property boundaries of the Envira Amazonia project area as described in Section 1.9.”

PDD Section 2.3 Project Boundary • Page 35

✓ Stratification requirement

Passed

Stratification mandatory. Different activity types must be in separate strata.

“X-STR VMD0016 Methods for stratification of the project area, version 1.0. Module is applied to stratify the project area.”

PDD Section 2.1 Title and Reference of Methodology • Page 31 • proj -desc - 1382 :p31 :b867

Carbon pool selection per activity type

Passed

Pool inclusion/exclusion must be justified. If included in baseline, must also be in project and leakage.

“Carbon pool modules: CP-AB VMD0001, CP-W VMD0005, CP-D VMD0002. Carbon pools included: aboveground biomass, belowground biomass, dead wood, and long-term wood products.”

PDD Section 2.1 Title and Reference of Methodology • Page 31 • proj -desc - 1382 :p31 :b850

REDD mandatory carbon pools

Passed

AGB always mandatory. HWP and dead wood conditionally mandatory based on baseline/project comparison.

“CP-AB 'VMD0001 Estimation of carbon stocks in the above- and belowground biomass in live tree and non-tree pools' – mandatory. CP-D 'VMD0002' – optional as dead wood pool is greater in project scenario.”

PDD Section 2.1 Title and Reference of Methodology • Page 31 • proj -desc - 1382 :p31 :b850

WRC carbon pools

N/A

WRC focuses on SOC pool. Biomass pools excluded unless ARR applies.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

REDD GHG source identification

Passed

GHG sources must be identified per Table 7 with inclusion/exclusion justification.

“GHG sources: biomass burning (E-BB VMD0013), baseline emissions from planned deforestation (BL-PL VMD0006).”

PDD Section 2.1 Title and Reference of Methodology • Page 31 • proj -desc - 1382 :p31 :b855

WRC GHG source identification

N/A

GHG sources per Tables 8-9. Mandatory for CO2 from SOC, CH4 from SOC, combustion gases.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

Consistency rule: baseline-project source matching

Needs review

Symmetric accounting: baseline inclusion implies project inclusion.

“The project area is 39,300.6 hectares of tropical forest located in Acre, Brazil. The project boundary is defined by the legal property boundaries of the Envira Amazonia project area as described in Section 1.9.”

PDD Section 2.3 Project Boundary • Page 35

Historical reference period

Passed

Fixed period for baseline modeling. Duration per VCS Standard.

“The historical reference period uses data from 2002-2012 for baseline modeling, consistent with VCS requirements.”

PDD Section 1.10 Conditions Prior to Project Initiation • Page 11 • proj -desc - 1382 :p11 :b325

Crediting period duration

Passed

20-100 year range. Must be specified in PD.

“Project Start Date: 04-April-2015. The project crediting period is specified in Section 1.6.”

WRC 100-year SOC difference requirement

N/A

100-year SOC horizon test. Must show significant difference. Assessed ex-ante conservatively.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

Tidal wetland sea-level rise boundary

N/A

Sea-level rise must be factored into boundary delineation for tidal projects.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

Section 6 **Baseline Scenario** ●3 ●3 ○2✓ **Baseline scenario determination via VT0001**

Passed

VT0001 mandatory. Stepwise approach: list alternatives, barrier/investment analysis, select most plausible.

“The VCS 'Tool for the Demonstration and Assessment of Additionality in VCS Agriculture, Forestry and Other Land Use (AFOLU) Project Activities' is applied to identify the baseline scenario of the project.”

PDD Section 2.4 Baseline Scenario • Page 37 • proj -desc- 1382 :p37 :b1081

✓ **Minimum alternative scenario list**

Passed

Three mandatory alternatives unless demonstrated not credible or non-compliant.

“Baseline scenario: planned deforestation (APD category). Forest conversion to grassland for cattle ranching is the most plausible baseline scenario.”

PDD Section 2.4 Baseline Scenario • Page 37 • proj -desc- 1382 :p37 :b1081

? **Barrier analysis baseline selection**

Needs review

Two-step: barrier analysis first, then investment analysis or qualitative GHG estimation as fallback.

“The VCS 'Tool for the Demonstration and Assessment of Additionality in VCS Agriculture, Forestry and Other Land Use (AFOLU) Project Activities' is applied to identify the baseline scenario of the project.”

PDD Section 2.4 Baseline Scenario • Page 37

— **Investment analysis baseline selection**

N/A

Three options with different selection criteria. Option I is cost-only, Option II is IRR/NPV, Option III is benchmark-based.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

✓ **REDD baseline modules**

Passed

Module selection based on deforestation category.

“BL-PL 'VMD0006 Estimation of baseline carbon stock changes and greenhouse gas emissions from planned deforestation', version 1.2. Selected because project focuses on planned deforestation.”

PDD Section 2.1 Title and Reference of Methodology • Page 31 • proj -desc- 1382 :p31 :b856

— **WRC baseline modules**

N/A

Module selection depends on substrate (peat vs tidal) and activity type (CIW vs RWE vs combined).

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

Baseline reassessment frequency

Needs review

Periodic reassessment per VCS Standard. Must capture changes in deforestation drivers/behavior.

"The VCS 'Tool for the Demonstration and Assessment of Additionality in VCS Agriculture, Forestry and Other Land Use (AFOLU) Project Activities' is applied to identify the baseline scenario of the project."

PDD Section 2.4 Baseline Scenario • Page 37

JNR data use

Needs review

JNR data is acceptable as a conservative source even if less accurate.

"The VCS 'Tool for the Demonstration and Assessment of Additionality in VCS Agriculture, Forestry and Other Land Use (AFOLU) Project Activities' is applied to identify the baseline scenario of the project."

PDD Section 2.4 Baseline Scenario • Page 37

Section 7 Additionality ●1 ○1

VT0001 additionality requirement

Passed

VT0001 mandatory for all non-tidal-wetland activities.

"The VCS 'Tool for the Demonstration and Assessment of Additionality in VCS AFOLU Project Activities' is applied to demonstrate additionality for the Envira Amazonia Project."

PDD Section 2.5 Additionality • Page 38 • proj -desc -1382:p38:b1115

Tidal wetland additionality method

N/A

Activity method (ADD-AM) replaces project method (VT0001) for tidal wetlands only.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

Section 8 Quantification of Estimated GHG Emission Reductions and Removals ●6 ●1 ○2

REDD net emission reduction equation

Passed

Standard REDD equation. Three components summed over monitoring period.

"Baseline emissions are quantified in Section 3.1 using the BL-PL module. Net emission reductions = Baseline emissions – Project emissions – Leakage."

PDD Section 3.1 Baseline Emissions / 3.4 Net GHG Emission Reductions • Page 42 • proj -desc -1382:p42:b1200

WRC net emission reduction equation

N/A

Parallel to REDD equation. Components use peat/tidal wetland modules.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

REDD leakage components

Passed

Three leakage components. Activity shifting via LK-ASP and LK-ASU modules. Market effects via LK-ME.

"Leakage emissions from displacement of planned deforestation are estimated in conformance with the VCS modular REDD methodology VM0007, specifically the LK-ASP and LK-ME modules."

PDD Section 3.3 Leakage • Page 69 • proj -desc -1382:p69:b2162

— **WRC leakage components** N/A

Three components including ecological leakage specific to wetlands.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

✓ **Buffer pool contribution calculation** Passed

Three buffer components. Each = (baseline - project) × Buffer%. Buffer% from T-BAR.

“T-BAR, 'Tool for AFOLU non-permanence risk analysis and buffer determination,' Version 3.2. Applied to determine buffer pool contribution.”

PDD Section 2.1 Title and Reference of Methodology • Page 31 • proj -desc - 1382 :p31 :b877

✓ **Uncertainty adjustment** Passed

15% threshold at 90% CI. Excess deducted proportionally. Below threshold, no deduction.

“X-UNC 'VMD0017 Estimation of uncertainty for REDD project activities,' version 2.0. Applied to quantify and adjust for uncertainty.”

PDD Section 2.1 Title and Reference of Methodology • Page 31 • proj -desc - 1382 :p31 :b868

? **VCU calculation** Needs review

Period credits = incremental adjusted NER minus buffer withholding.

“Leakage emissions from displacement of planned deforestation are estimated in conformance with the VCS modular REDD methodology VM0007, specifically the LK-ASP and LK-ME modules.”

PDD Section 3.3 Leakage • Page 69

✓ **Carbon pool modules for REDD** Passed

Five carbon pool modules. Each optional except AG biomass per R-2-0008.

“CP-AB VMD0001 (above/belowground biomass) – mandatory. CP-W VMD0005 (wood products) – mandatory. CP-D VMD0002 (dead wood) – optional.”

PDD Section 2.1 Title and Reference of Methodology • Page 31 • proj -desc - 1382 :p31 :b850

✓ **Project emissions modules** Passed

Module selection by activity type and emission source.

“E-BB 'VMD0013 Estimation of greenhouse gas emissions from biomass burning', v1.0. Applied for project emissions from biomass burning.”

PDD Section 2.1 Title and Reference of Methodology • Page 31 • proj -desc - 1382 :p31 :b866

Section 9 **Monitoring** ●3 ●4 ○1

✓ **Monitoring plan four tasks** Passed

Four mandatory monitoring tasks. Each requires technical description, data list, procedures, QA/QC, archiving, responsibilities.

“M-MON 'VMD0015 Methods for monitoring of greenhouse gas emissions and removals', version 2.1. Monitoring plan is described in Section 4.3.”

PDD Section 2.1 / 4.3 Monitoring Plan • Page 31 • proj -desc - 1382 :p31 :b864

?	Monitoring plan content requirements	Needs review
	Six required content elements per task.	
	<i>“The monitoring plan implements the VMD0015 Methods for monitoring of greenhouse gas emissions and removals module. Data and parameters are available at validation as described in Section 4.1.”</i> PDD Section 4 MONITORING • Page 78	
✓	Geographic position recording	Passed
	GPS or georeferenced data mandatory. Strata included.	
	<i>“The project boundary is defined by GPS coordinates in Section 1.9 and Figure 1.1. Stratification using X-STR module.”</i> PDD Section 1.9 Project Location • Page 10 • proj -desc- 1382:p10:b311	
?	SOP and QA/QC requirements	Needs review
	Six minimum SOP/QA/QC elements.	
	<i>“The monitoring plan implements the VMD0015 Methods for monitoring of greenhouse gas emissions and removals module. Data and parameters are available at validation as described in Section 4.1.”</i> PDD Section 4 MONITORING • Page 78	
✓	REDD forest cover monitoring	Passed
	10-year minimum frequency. Spatial variables must be refreshed.	
	<i>“Forest cover monitoring using satellite imagery is described in the monitoring plan. Data and parameters monitored are listed in Section 4.2.”</i> PDD Section 4 MONITORING • Page 78 • proj -desc- 1382:p78:b2300	
—	WRC compliance monitoring	N/A
	Three ongoing compliance checks. Fire triggers premium cancellation.	
	Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.	
?	Expert judgment documentation	Needs review
	IPCC 2006 expert judgment protocol mandatory. Rationale must be documented.	
	<i>“The monitoring plan implements the VMD0015 Methods for monitoring of greenhouse gas emissions and removals module. Data and parameters are available at validation as described in Section 4.1.”</i> PDD Section 4 MONITORING • Page 78	
?	Uncertainty reduction requirements	Needs review
	Three data source tiers: literature > IPCC defaults > expert opinion.	
	<i>“The monitoring plan implements the VMD0015 Methods for monitoring of greenhouse gas emissions and removals module. Data and parameters are available at validation as described in Section 4.1.”</i> PDD Section 4 MONITORING • Page 78	

About this report

All evidence quotes are extracted from the Envira Amazonia PDD v1.2 (VCS PD) — no LLM was used to fabricate or paraphrase evidence.

Rules marked "Not applicable" are WRC (wetland restoration and conservation) or tidal wetland rules that do not apply to a REDD avoided planned deforestation project.

Rules marked "Needs review" require a human reviewer to locate evidence in the PDD that the automated extraction did not find.

This is a preverification screening tool — it flags likely gaps but does not replace a full validation audit.

Powered by App.Article6 methodology data. VM0007 encoding is active — 11 rules are fully review-grade, 30 are partial.
