

Envira Amazonia Project

VM0007 v1-8 • REDD Methodology Modules • 142 pages • 29 Jun 2026

About this report: This is an automated pre-verification screening report. It separates what the Article6 Quick Check system has deterministically confirmed from what still needs human reviewer judgment. **This is not a final validation audit.**

20 Rules with automated evidence	18 Not applicable (WRC/tidal)	20 Need reviewer confirmation	58 Total VM0007 rules
-------------------------------------	----------------------------------	----------------------------------	--------------------------

1. Deterministic Core Checks

These 6 checks are the only automated evidence retrievals the system runs. Each result comes from a deterministic pipeline (no LLM) with provenanced PDD quotes, page numbers, and section references.

host country

✓ Evidence found

Answer: Brazil

“The Envira Amazonia Project is located near Feijó in Acre, Brazil. The property where the project area is”

Page: 3 · **Section:** Summary Description of the Project · **Path:** 1 > 1.1 · **Source:** fact_contract · proj-desc-1382-extracted:p3:b68:69787023

Why this is sufficient: Host country (S-1 Applicability Conditions — project location). The evidence is specific to the Envira PDD and not a generic methodology reference.

methodology

✓ Evidence found

Answer: VM0007

“entitled, “VM0007: REDD Methodology Modules (REDD-MF).” The only eligible activity as part of this”

Page: 31 · **Section:** Title and Reference of Methodology · **Path:** 2 > 2.1 · **Source:** fact_contract · proj-desc-1382-extracted:p31:b781:87b6e442

Why this is sufficient: Methodology identification (S-1, S-2 — methodology/module references). The evidence is specific to the Envira PDD and not a generic methodology reference.

baseline scenario

✓ Evidence found

Answer: The most likely baseline scenario in conversion of the non-legal reserve to pasture

“The most likely baseline scenario in conversion of the non-legal reserve to pasture.”

Page: 38 · **Section:** Conversion to Pasture · **Path:** 2 > 2.4 > 2.4.2 · **Source:** exact_section · proj-desc-1382-extracted:p38:b1100:9eb0e0a1

Why this is sufficient: Baseline scenario (S-3 — baseline determination). The evidence is specific to the Envira PDD and not a generic methodology reference.

additionality

✓ Evidence found

Answer: As the project activity generates no financial or economic benefits to the project proponents other than VCS related income through the project activity, a simp

“As the project activity generates no financial or economic benefits to the project proponents other than VCS related income through the project activity, a simple cost analysis is justified.”

Page: 38 · **Section:** Simple Cost Analysis · **Path:** 2 > 2.5 > 2.5.1 · **Source:** exact_section · proj-desc-1382-extracted:p38:b1119:43afd076

Why this is sufficient: Additionality (S-4 — additionality demonstration). The evidence is specific to the Envira PDD and not a generic methodology reference.

leakage

✓ Evidence found

Answer: Leakage emissions from displacement of planned deforestation are estimated in conformance with the VCS modular REDD methodology VM0007, specifically the LK-ASP

“Leakage emissions from displacement of planned deforestation are estimated in conformance with the VCS modular REDD methodology VM0007, specifically the LK-ASP and LK-ME modules. These modules provide for accounting for activity shifting leakage resulting from displacement of deforestation activities”

Page: 69 · Section: Leakage · Path: 3 > 3.3 · Source: exact_section · proj-desc-1382-extracted:p69:b2162:89495e2a

Why this is sufficient: Leakage / quantification (S-5 — leakage, net emissions, buffer, VCU calculation). The evidence is specific to the Envira PDD and not a generic methodology reference.

stakeholder consultation

✓ Evidence found

Answer: The following stakeholders were involved in project design to optimize climate, community and biodiversity benefits while ensuring the Envira Amazonia Project w

“The following stakeholders were involved in project design to optimize climate, community and biodiversity benefits while ensuring the Envira Amazonia Project was best aligned with the State of Acre’s climate mitigation, community, and biodiversity goals.”

Page: 122 · Section: STAKEHOLDER COMMENTS · Path: 6 · Source: exact_section · proj-desc-1382-extracted:p122:b4479:d4eb8215

Why this is sufficient: Stakeholder consultation (S-6 — stakeholder comments section). The evidence is specific to the Envira PDD and not a generic methodology reference.

2. VM0007 Rule Inventory

All 58 VM0007 v1-8 rules are listed below. Each rule is categorised as: **covered by deterministic check** (has automated evidence), **not applicable** (WRC/tidal wetland rules for a REDD project), or **needs reviewer confirmation** (no per-rule automated evidence exists yet).

needs review REDD forest land definition

Project land must meet forest definition threshold for 10+ years. Mangroves exempt from height.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review REDD baseline deforestation category

Binary classification: unplanned (no legal right) vs planned (legally permitted conversion). Determines which BL module applies.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review AUDef agent criteria

Three criteria must ALL be met. Excludes large-scale industrial agriculture/aquaculture.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review APDef legal authorization

Must have legal documentation authorizing conversion.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

N/A WRC water table prohibition

Water table lowering is prohibited except for two specific exceptions.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

N/A WRC organic soil burning prohibition

Absolute prohibition on organic soil burning as a project activity.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

N/A WRC nitrogen fertilizer prohibition

No nitrogen fertilizer application allowed during entire crediting period.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

N/A WRC hydrological connectivity check

Spillover emissions from hydrological changes must be assessed using the stepwise significance procedure in Appendix 1 (alternative to T-SIG).

Procedure covers GHG emissions by source, carbon stock changes by pool, and leakage GHG emissions.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

N/A RWE prior land use requirement

Three alternative conditions. Must demonstrate one with verifiable evidence.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

needs review Peatland VCS definition

Must meet VCS peatland definition based on IPCC organic soil thresholds.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

N/A Tidal wetland restoration activities

Must include at least one defined restoration activity type.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

N/A CIW tidal wetland conservation activities

Must include at least one defined conservation activity type.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

N/A AUWD agent criteria

Parallel to AUDef criteria but for wetland degradation.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

needs review IFM and ARR exclusion

IFM and ARR activities are excluded from VM0007. WRC projects that also implement ARR activities must use an appropriate ARR methodology, e.g. VM0047, for aboveground biomass accounting.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

automated Leakage prevention activity restrictions

Two specific leakage prevention activities are explicitly prohibited.

Covered by deterministic check: leakage. The PDD evidence found is shown in Section 1 above.

needs review Geographic boundary definition

Six required data elements for each discrete land parcel.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review No spatial overlap between baselines

Strict no-overlap rule. REDD+WRC combination is the sole exception.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review Exclusion of land in other GHG programs

Double-counting prevention. Must track and report exclusions.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review REDD reference region definition

RRD required for baseline modeling. Must be in same jurisdiction with similar characteristics.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review REDD proxy area definition

Proxy areas required for planned deforestation baseline.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review Stratification requirement

Stratification mandatory. Different activity types must be in separate strata.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review Carbon pool selection per activity type

Pool inclusion/exclusion must be justified. If included in baseline, must also be in project and leakage.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review REDD mandatory carbon pools

AGB always mandatory. HWP and dead wood conditionally mandatory based on baseline/project comparison.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

N/A WRC carbon pools

WRC focuses on SOC pool. Biomass pools excluded unless ARR applies.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

needs review REDD GHG source identification

GHG sources must be identified per Table 7 with inclusion/exclusion justification.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

N/A WRC GHG source identification

GHG sources per Tables 8-9. Mandatory for CO₂ from SOC, CH₄ from SOC, combustion gases.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

needs review Consistency rule: baseline-project source matching

Symmetric accounting: baseline inclusion implies project inclusion.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review Historical reference period

Fixed period for baseline modeling. Duration per VCS Standard.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

needs review Crediting period duration

20-100 year range. Must be specified in PD.

No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

N/A WRC 100-year SOC difference requirement

100-year SOC horizon test. Must show significant difference. Assessed ex-ante conservatively.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

N/A Tidal wetland sea-level rise boundary

Sea-level rise must be factored into boundary delineation for tidal projects.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

S-3 — Baseline Scenario Determination ●3 ●1 ○2

automated **Baseline scenario determination via VT0001**

VT0001 mandatory. Stepwise approach: list alternatives, barrier/investment analysis, select most plausible.
Covered by deterministic check: baseline_scenario. The PDD evidence found is shown in Section 1 above.

needs review **Minimum alternative scenario list**

Three mandatory alternatives unless demonstrated not credible or non-compliant.
No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

automated **Barrier analysis baseline selection**

Two-step: barrier analysis first, then investment analysis or qualitative GHG estimation as fallback.
Covered by deterministic check: baseline_scenario. The PDD evidence found is shown in Section 1 above.

N/A **Investment analysis baseline selection**

Three options with different selection criteria. Option I is cost-only, Option II is IRR/NPV, Option III is benchmark-based.
Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

automated **Baseline reassessment frequency**

Periodic reassessment per VCS Standard. Must capture changes in deforestation drivers/behavior.
Covered by deterministic check: baseline_scenario. The PDD evidence found is shown in Section 1 above.

needs review **JNR data use**

JNR data is acceptable as a conservative source even if less accurate.
No per-rule automated evidence validator exists for this requirement. A reviewer must locate evidence in the PDD and confirm compliance.

S-4 — Additionality ●1 ●1 ○0

automated **VT0001 additionality requirement**

VT0001 mandatory for all non-tidal-wetland activities.
Covered by deterministic check: additionality. The PDD evidence found is shown in Section 1 above.

N/A **Tidal wetland additionality method**

Activity method (ADD-AM) replaces project method (VT0001) for tidal wetlands only.
Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

automated REDD baseline modules

Module selection based on deforestation category.

Covered by deterministic check: leakage. The PDD evidence found is shown in Section 1 above.

N/A WRC baseline modules

Module selection depends on substrate (peat vs tidal) and activity type (CIW vs RWE vs combined).

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

automated REDD net emission reduction equation

Standard REDD equation. Three components summed over monitoring period.

Covered by deterministic check: leakage. The PDD evidence found is shown in Section 1 above.

N/A WRC net emission reduction equation

Parallel to REDD equation. Components use peat/tidal wetland modules.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

automated REDD leakage components

Three leakage components. Activity shifting via LK-ASP and LK-ASU modules. Market effects via LK-ME.

Covered by deterministic check: leakage. The PDD evidence found is shown in Section 1 above.

N/A WRC leakage components

Three components including ecological leakage specific to wetlands.

Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

automated Buffer pool contribution calculation

Three buffer components. Each = (baseline - project) × Buffer%. Buffer% from T-BAR.

Covered by deterministic check: leakage. The PDD evidence found is shown in Section 1 above.

automated Uncertainty adjustment

15% threshold at 90% CI. Excess deducted proportionally. Below threshold, no deduction.

Covered by deterministic check: leakage. The PDD evidence found is shown in Section 1 above.

automated VCU calculation

Period credits = incremental adjusted NER minus buffer withholding.

Covered by deterministic check: leakage. The PDD evidence found is shown in Section 1 above.

automated Carbon pool modules for REDD

Five carbon pool modules. Each optional except AG biomass per R-2-0008.

Covered by deterministic check: leakage. The PDD evidence found is shown in Section 1 above.

automated Project emissions modules

Module selection by activity type and emission source.

Covered by deterministic check: leakage. The PDD evidence found is shown in Section 1 above.

automated Monitoring plan four tasks

Four mandatory monitoring tasks. Each requires technical description, data list, procedures, QA/QC, archiving, responsibilities.
Covered by deterministic check: stakeholder_consultation. The PDD evidence found is shown in Section 1 above.

automated Monitoring plan content requirements

Six required content elements per task.
Covered by deterministic check: stakeholder_consultation. The PDD evidence found is shown in Section 1 above.

automated Geographic position recording

GPS or georeferenced data mandatory. Strata included.
Covered by deterministic check: stakeholder_consultation. The PDD evidence found is shown in Section 1 above.

automated SOP and QA/QC requirements

Six minimum SOP/QA/QC elements.
Covered by deterministic check: stakeholder_consultation. The PDD evidence found is shown in Section 1 above.

automated REDD forest cover monitoring

10-year minimum frequency. Spatial variables must be refreshed.
Covered by deterministic check: stakeholder_consultation. The PDD evidence found is shown in Section 1 above.

N/A WRC compliance monitoring

Three ongoing compliance checks. Fire triggers premium cancellation.
Not applicable — this project is REDD (avoided planned deforestation), not WRC or tidal wetland.

automated Expert judgment documentation

IPCC 2006 expert judgment protocol mandatory. Rationale must be documented.
Covered by deterministic check: stakeholder_consultation. The PDD evidence found is shown in Section 1 above.

automated Uncertainty reduction requirements

Three data source tiers: literature > IPCC defaults > expert opinion.
Covered by deterministic check: stakeholder_consultation. The PDD evidence found is shown in Section 1 above.

About this report

- **Deterministic evidence:** All evidence quotes in Section 1 are extracted from the Envira Amazonia PDD v1.2 (VCS PD) by the deterministic ingestion pipeline — no LLM was used to fabricate or paraphrase evidence.
- **Rule inventory:** The 58 VM0007 rules are sourced from the source-audited methodology pack (SHA 87eef90). Rules marked "needs reviewer confirmation" have no per-rule automated evidence validator in the current Quick Check system.
- **Not applicable rules:** 18 rules cover WRC (wetland restoration and conservation) or tidal wetland activities that do not apply to this REDD avoided planned deforestation project.
- **Limitation:** This is a pre-verification screening tool. It flags what the system can confirm and what needs human review, but does not replace a full validation audit.
- **Methodology status:** VM0007 v1-8 encoding is source-audited. All 58 rules have section context and source span references from the methodology document.
